
Hyperledger Fabric Architecture and Design

Baohua Yang
April, 2017

About Me

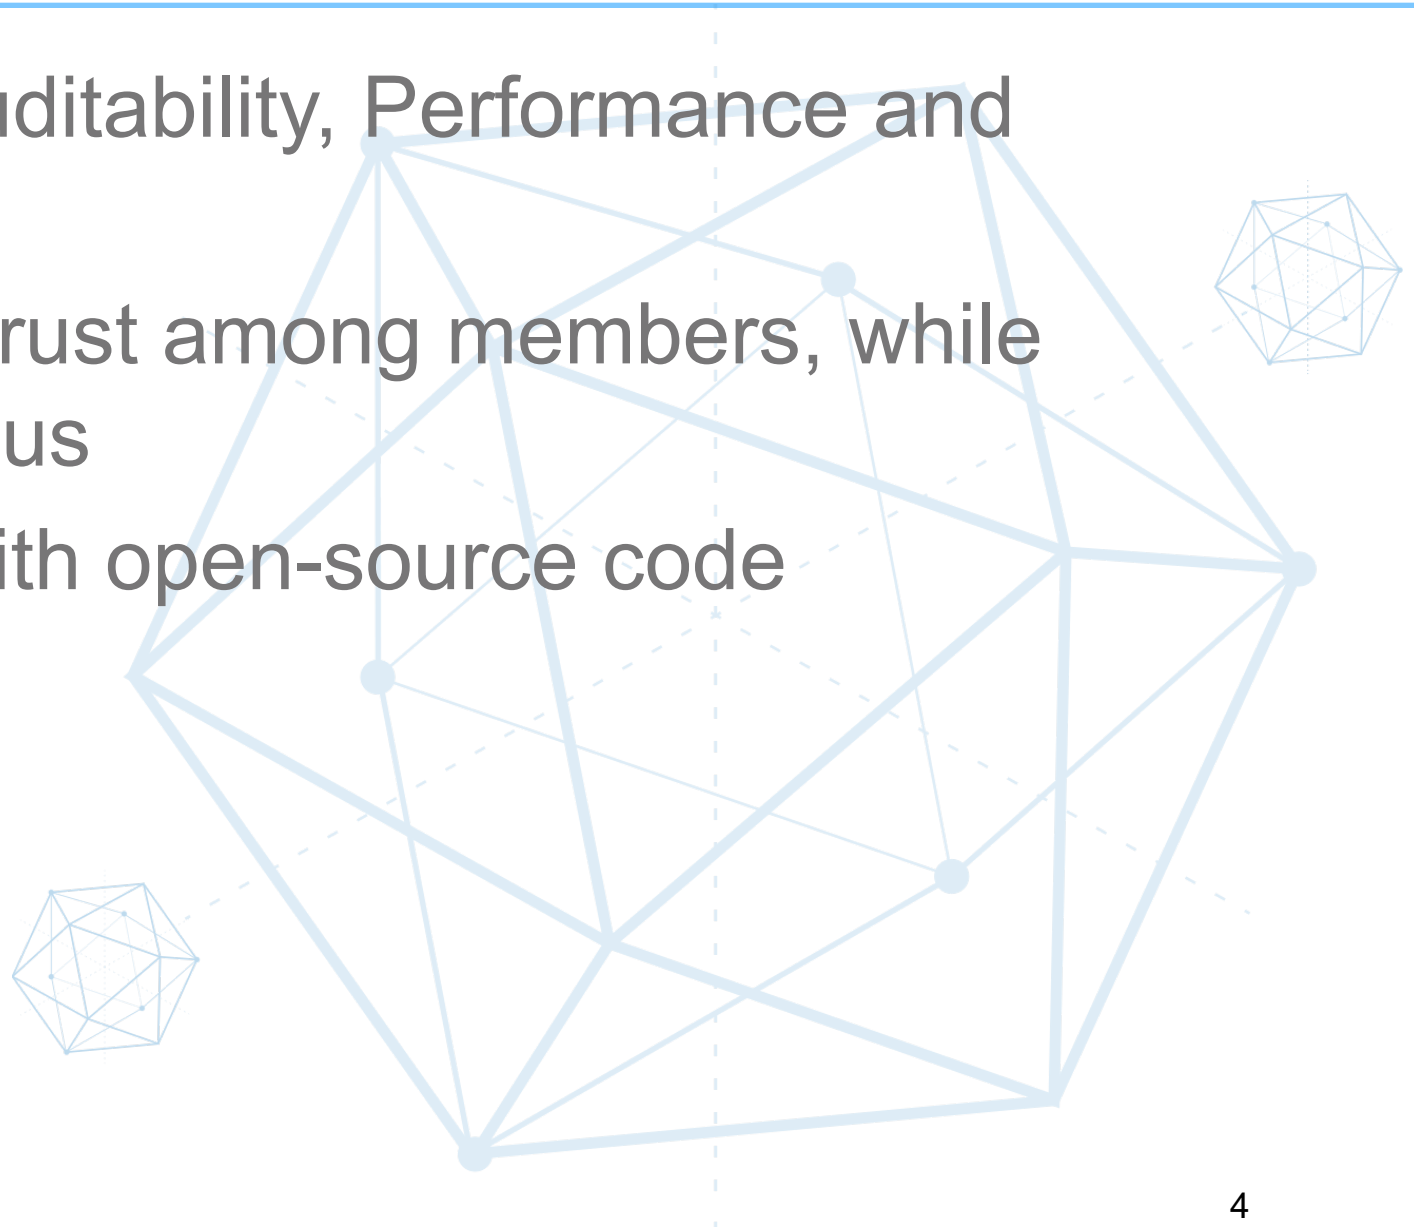
- **Researcher in IBM**
  - Fintech, Cloud and Analytics
- **Open-Source contributor**
  - Hyperledger, OpenStack, OpenDaylight, etc.
- **Hyperledger developer**
  - Code committer to fabric, sdk, Cello etc.
  - PTL of Cello project and fabric-sdk-py project
  - Chair of Hyperledger Technical Working Group China
  - Drafter of fabric sdk spec and multi-channel consensus spec

Existing Blockchain Technologies

- Limited throughput
- Slow transaction confirmation
- Designed for cryptocurrency
- Poor governance
- No privacy
- No settlement finality
- Anonymous processors
- …

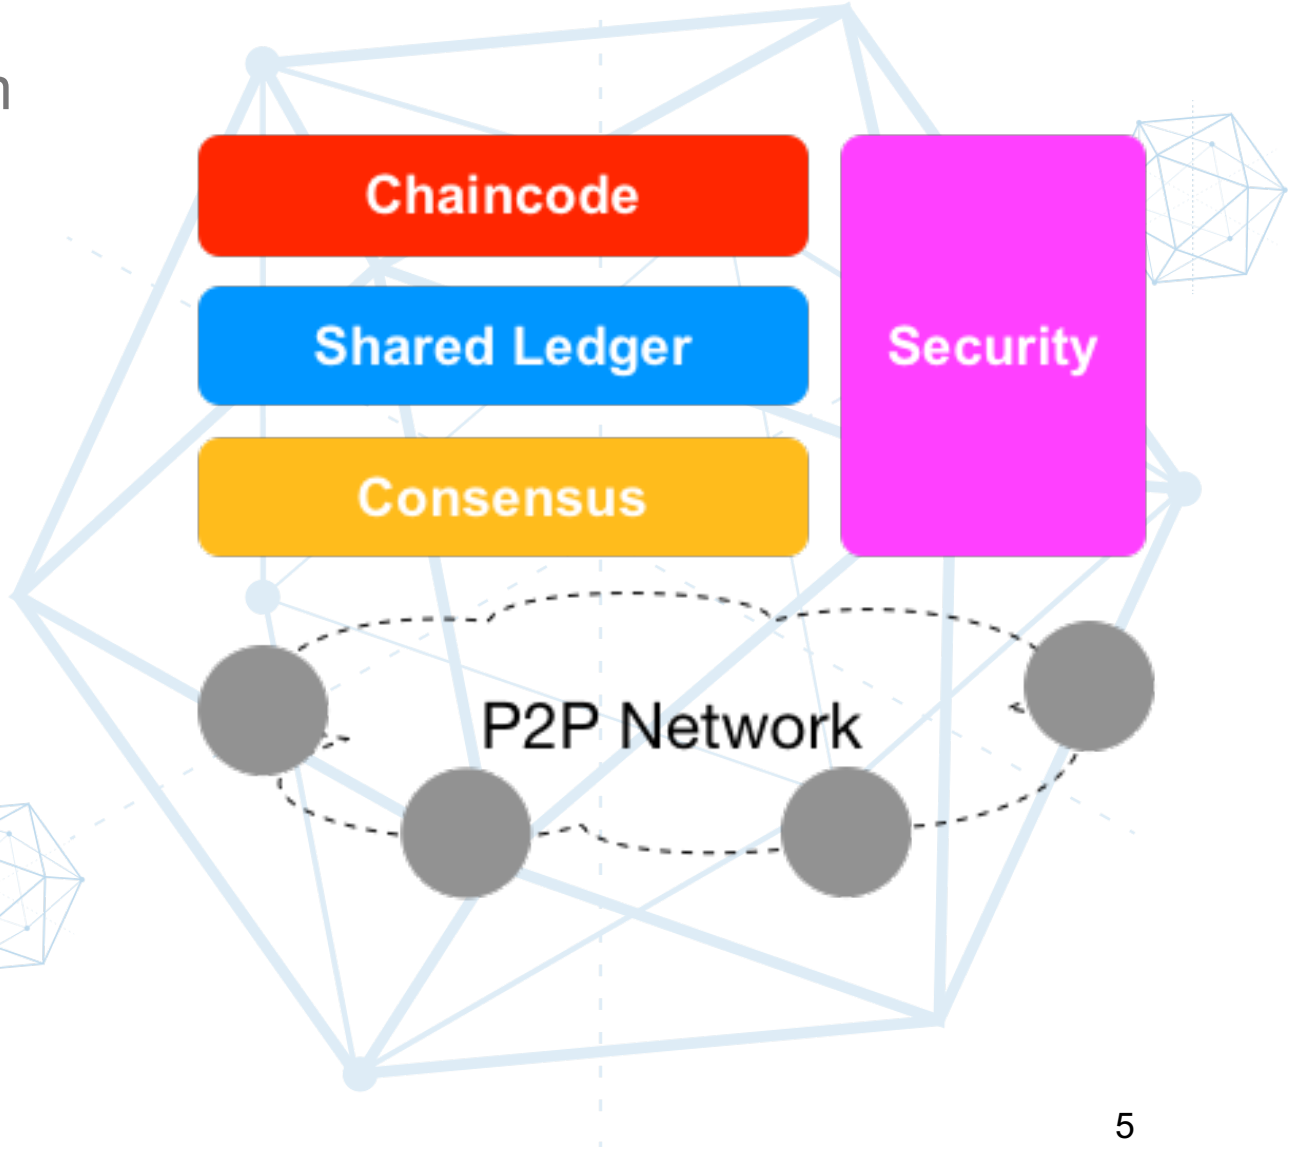
Hyperledger Fabric: Ledger for Enterprise

- Privacy, Confidentiality, Auditability, Performance and Scalability
- Permissioned with better trust among members, while enable optimized consensus
- Open protocol/standard with open-source code



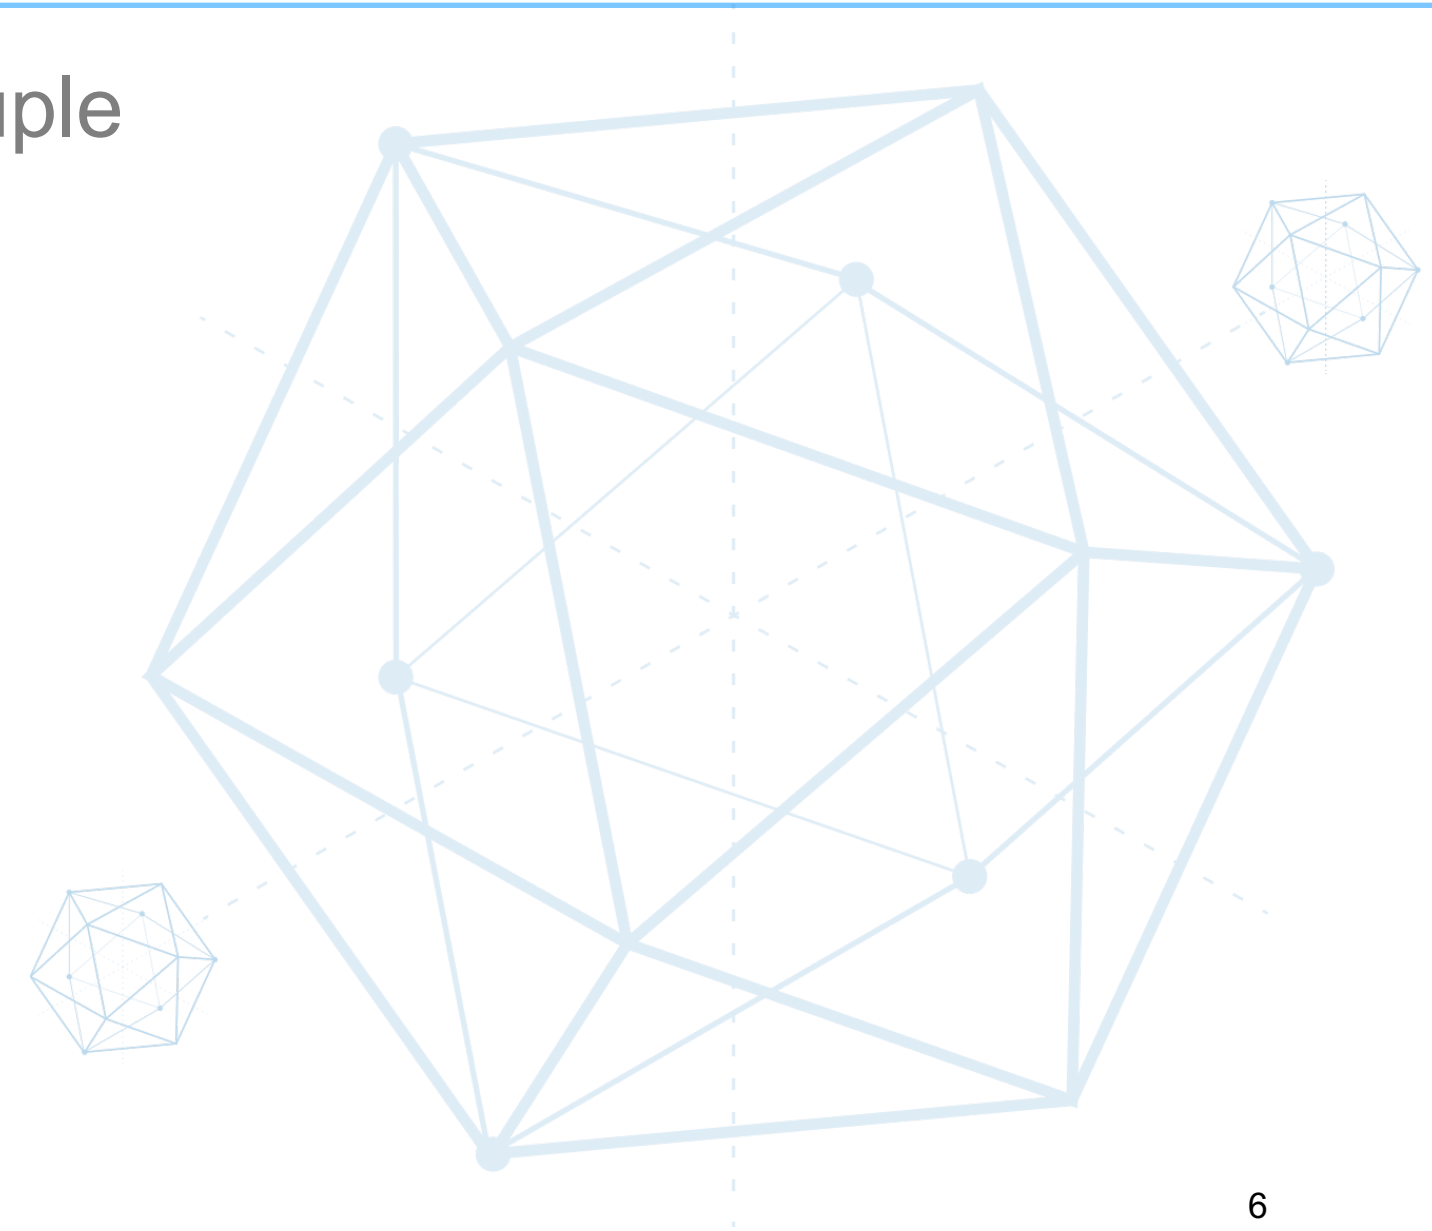
Fabric Main Components

- Shared Ledger
  - Append-only distributed record system
  - Blocks + states
- Smart Contract (Chaincode)
  - Business logics with transactions
  - Stateless
- Consensus
  - Verified and ordered transactions
- Security
  - Access control
  - Privacy protection
  - Verification
  - CA



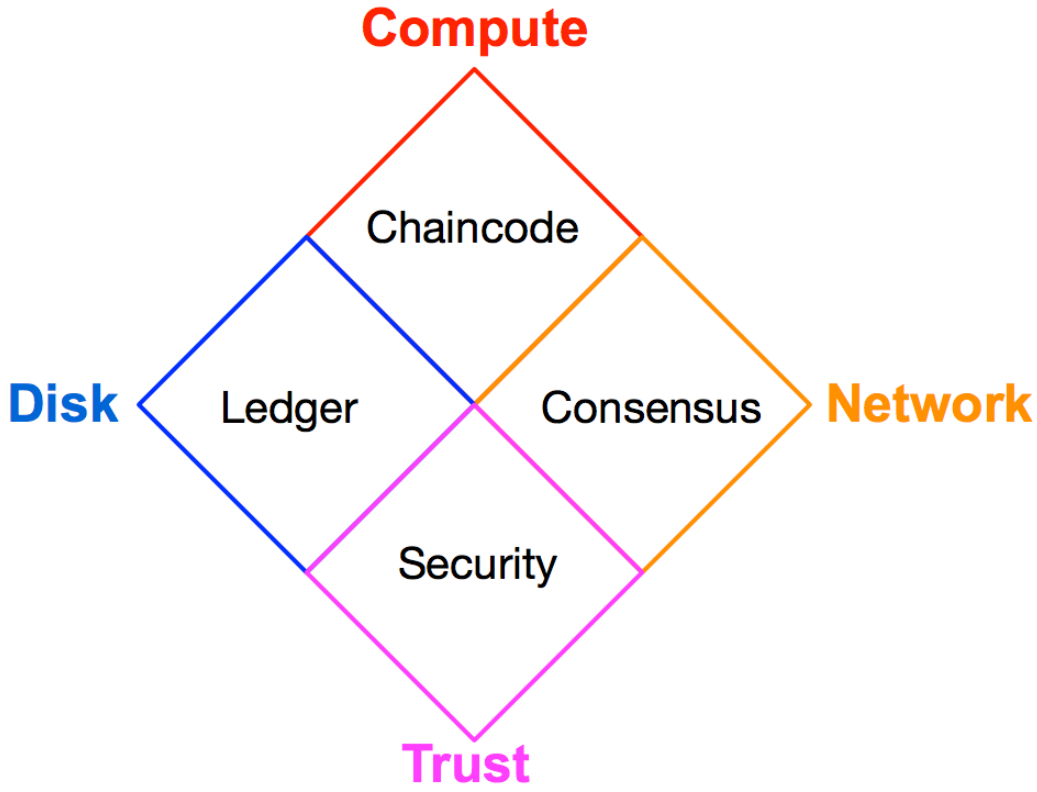
Fabric 1.0 Key Design

- Node Functionality Decouple
- Multi-Channel/Chain
- Consensus
- Permission and Privacy
- System Chaincode
- Pluggable components



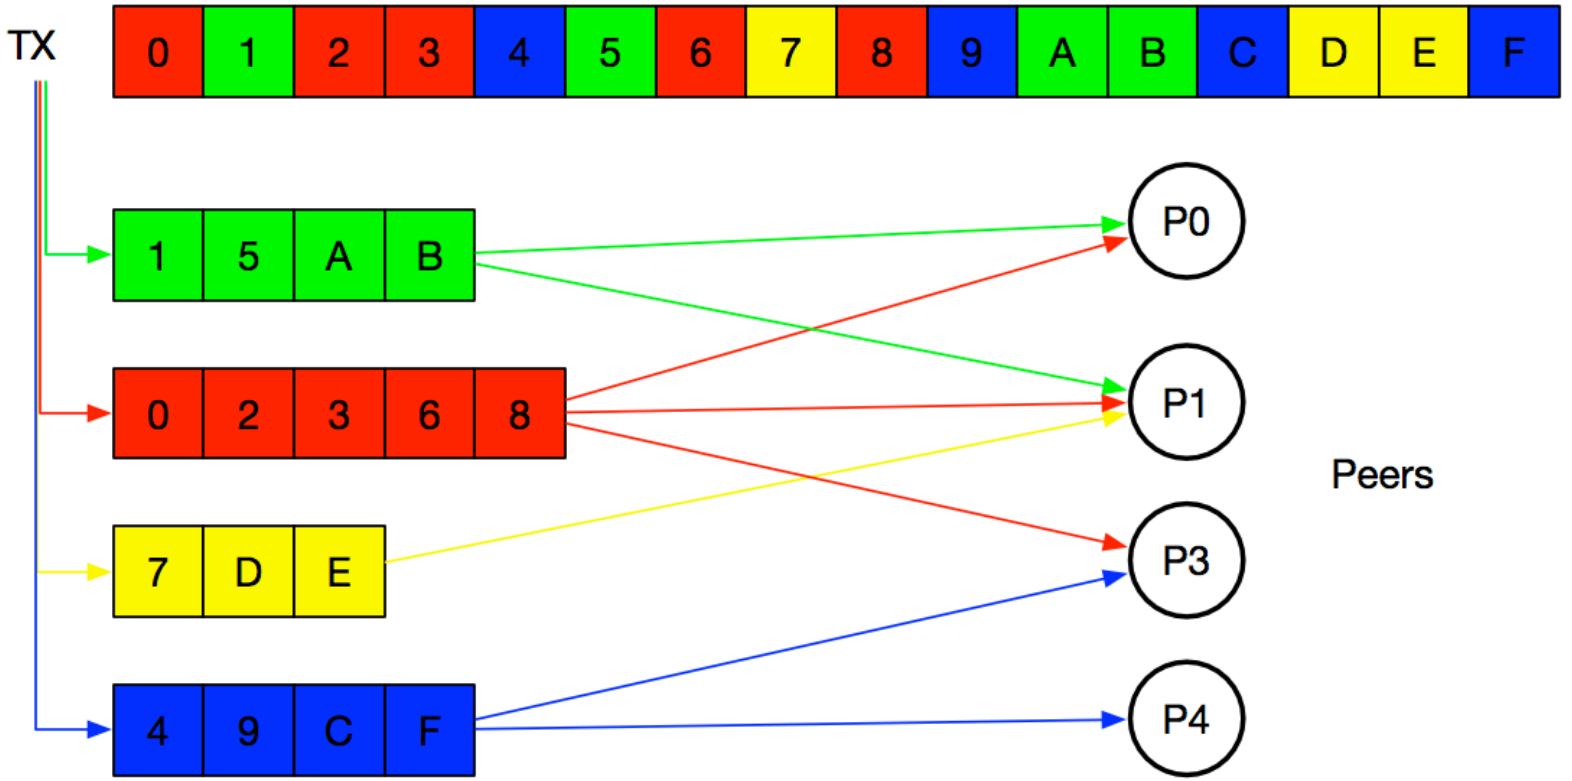
Node Functionality Decouple

- Various intensive requirements/workloads
  - Chaincode: Compute intensive
  - Shared Ledger: Disk intensive
  - Consensus: Network intensive
  - Security: Trust intensive
- Decouple full-functional nodes
  - **Endorser**: Endorse TX proposal
  - **Committer**: Write down block
  - **Orderer**: Only order, no TX aware
  - **CA**: Certificate management



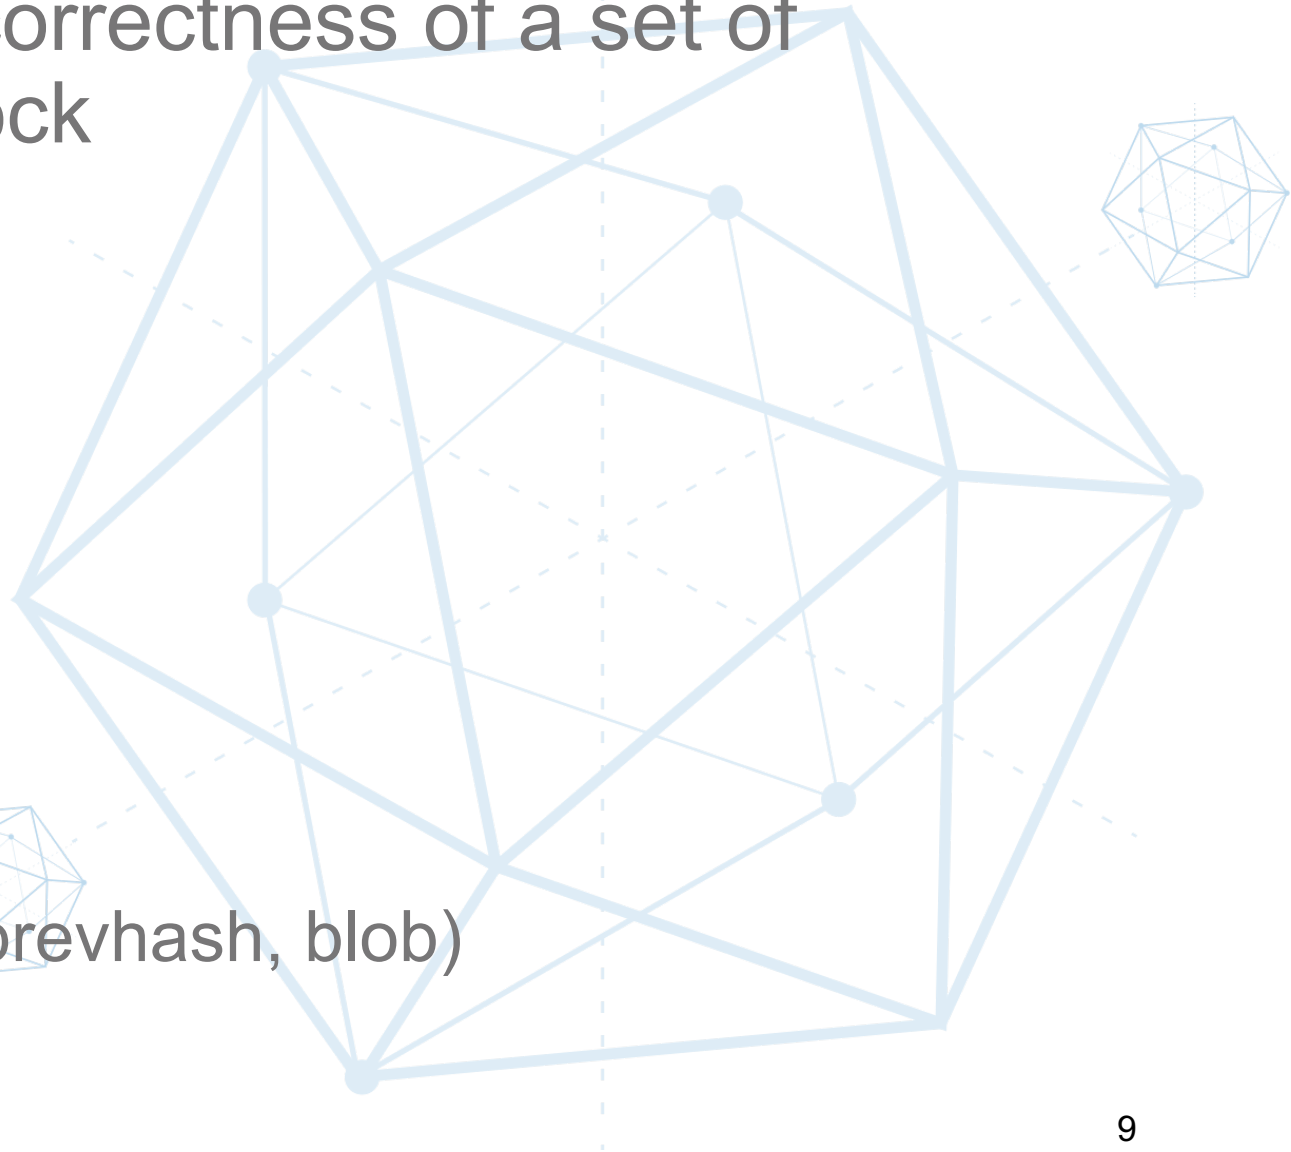
Multi-Channel/Chain

- Channel isolates the transactions, ledgers between organizations – Overlay network
- Peer can join channels accordingly



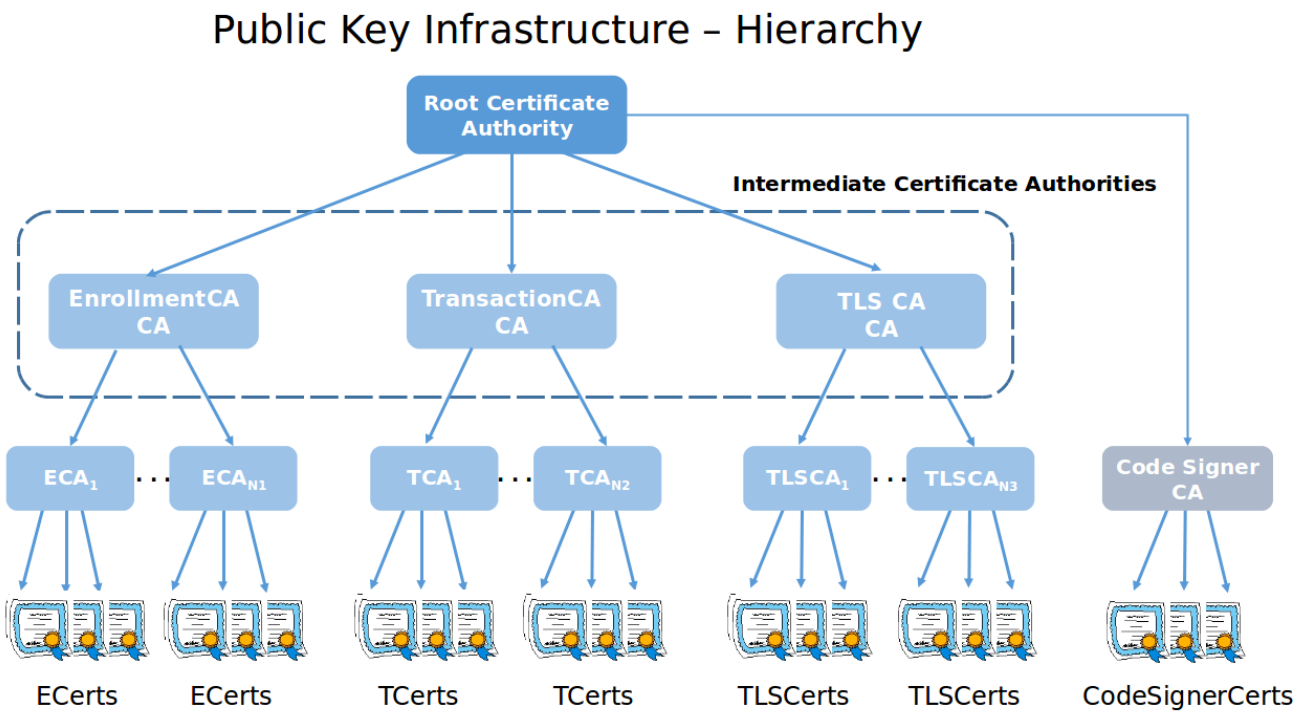
Consensus

- Full-circle verification of the correctness of a set of transactions comprising a block
  - Endorsement policy
  - MVCC validation on RW sets
  - Ordering
  - ACL
- Orderer
  - Solo, Kafka, BFT, and more…
  - broadcast(blob), deliver(seqno, prevhash, blob)



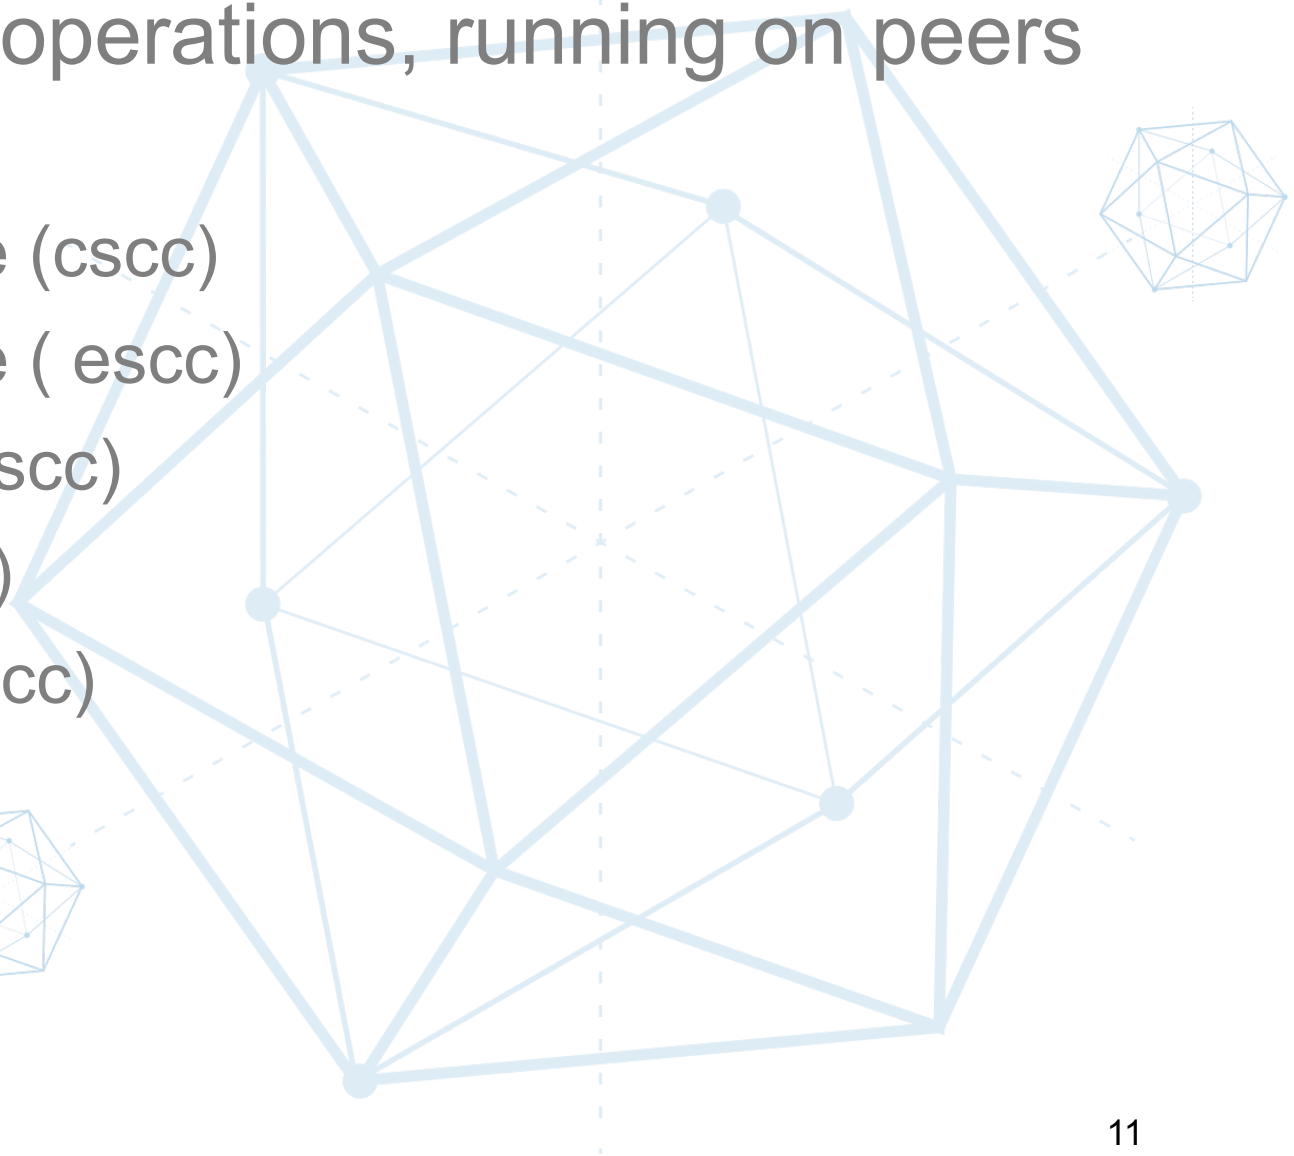
Permission and Privacy

- Permission at various levels
  - Network, channel, transaction
- Privacy for business
  - Anonymity
  - Un-linkability
  - Auditability and Accountability
- Fabric CA (PKI)
  - Identity registration management
  - Enrollment Cert (Ecert) and Transaction Cert (Tcert)



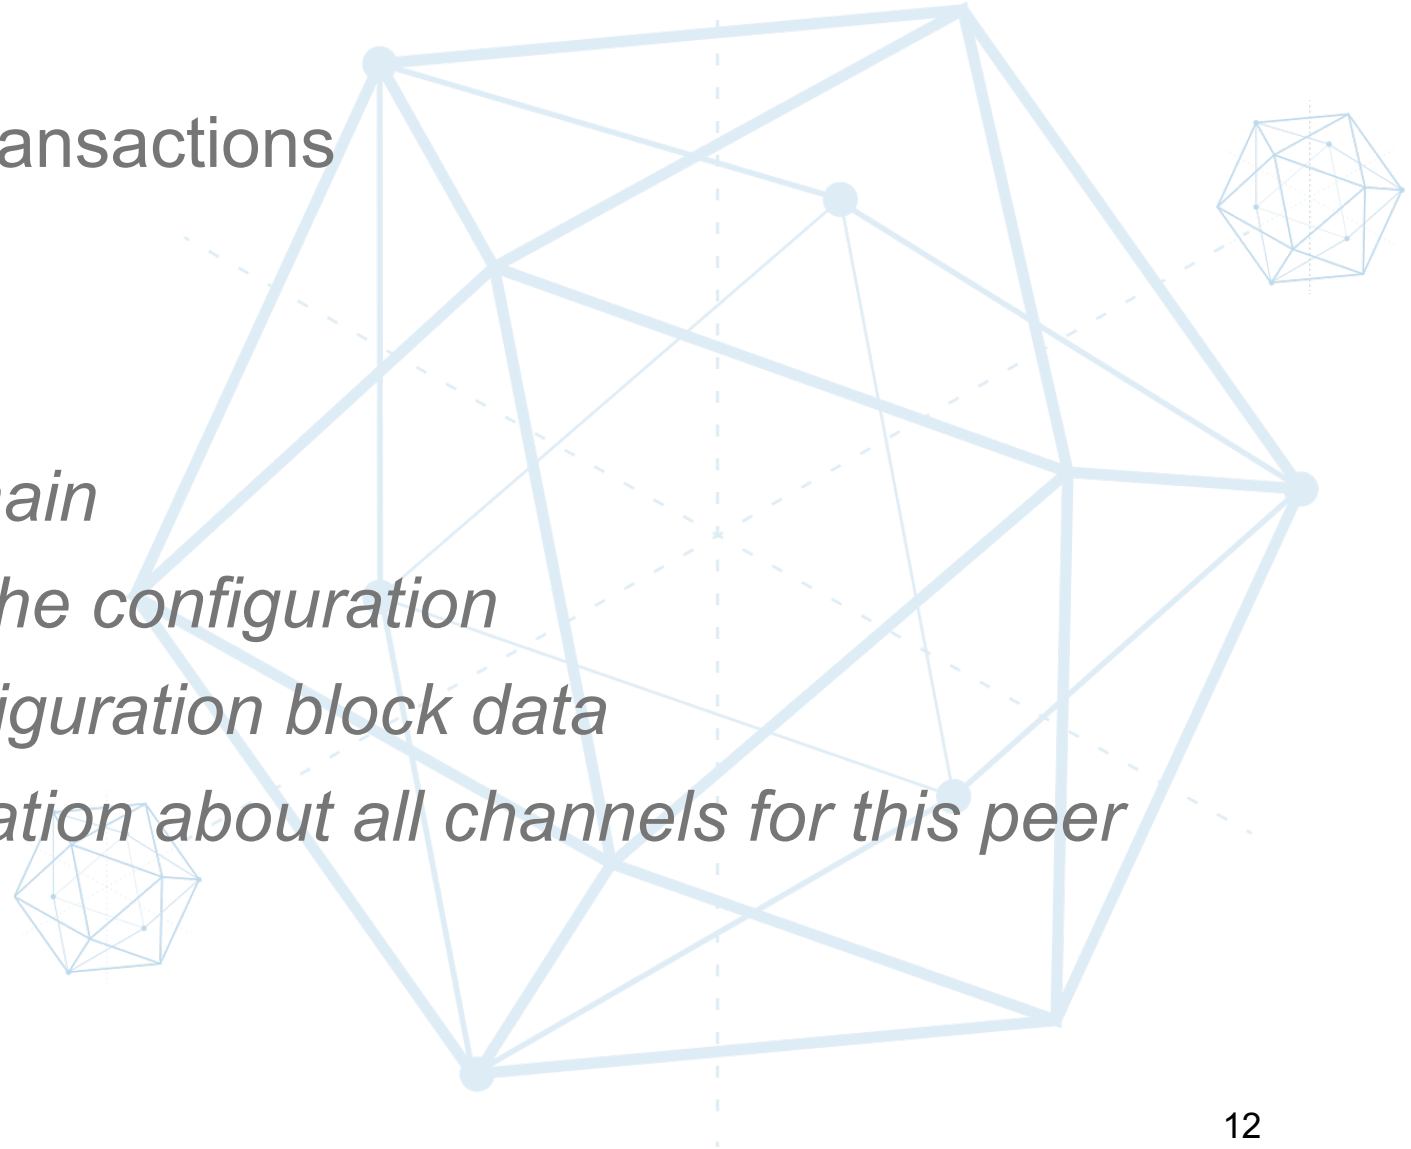
System Chaincode

- Chaincode to handle system operations, running on peers natively.
  - Configuration System Chaincode (cscc)
  - Endorsement System Chaincode (escc)
  - Validation System Chaincode (vscc)
  - Query System Chaincode (qscc)
  - Life-cycle System Chaincode (lccc)



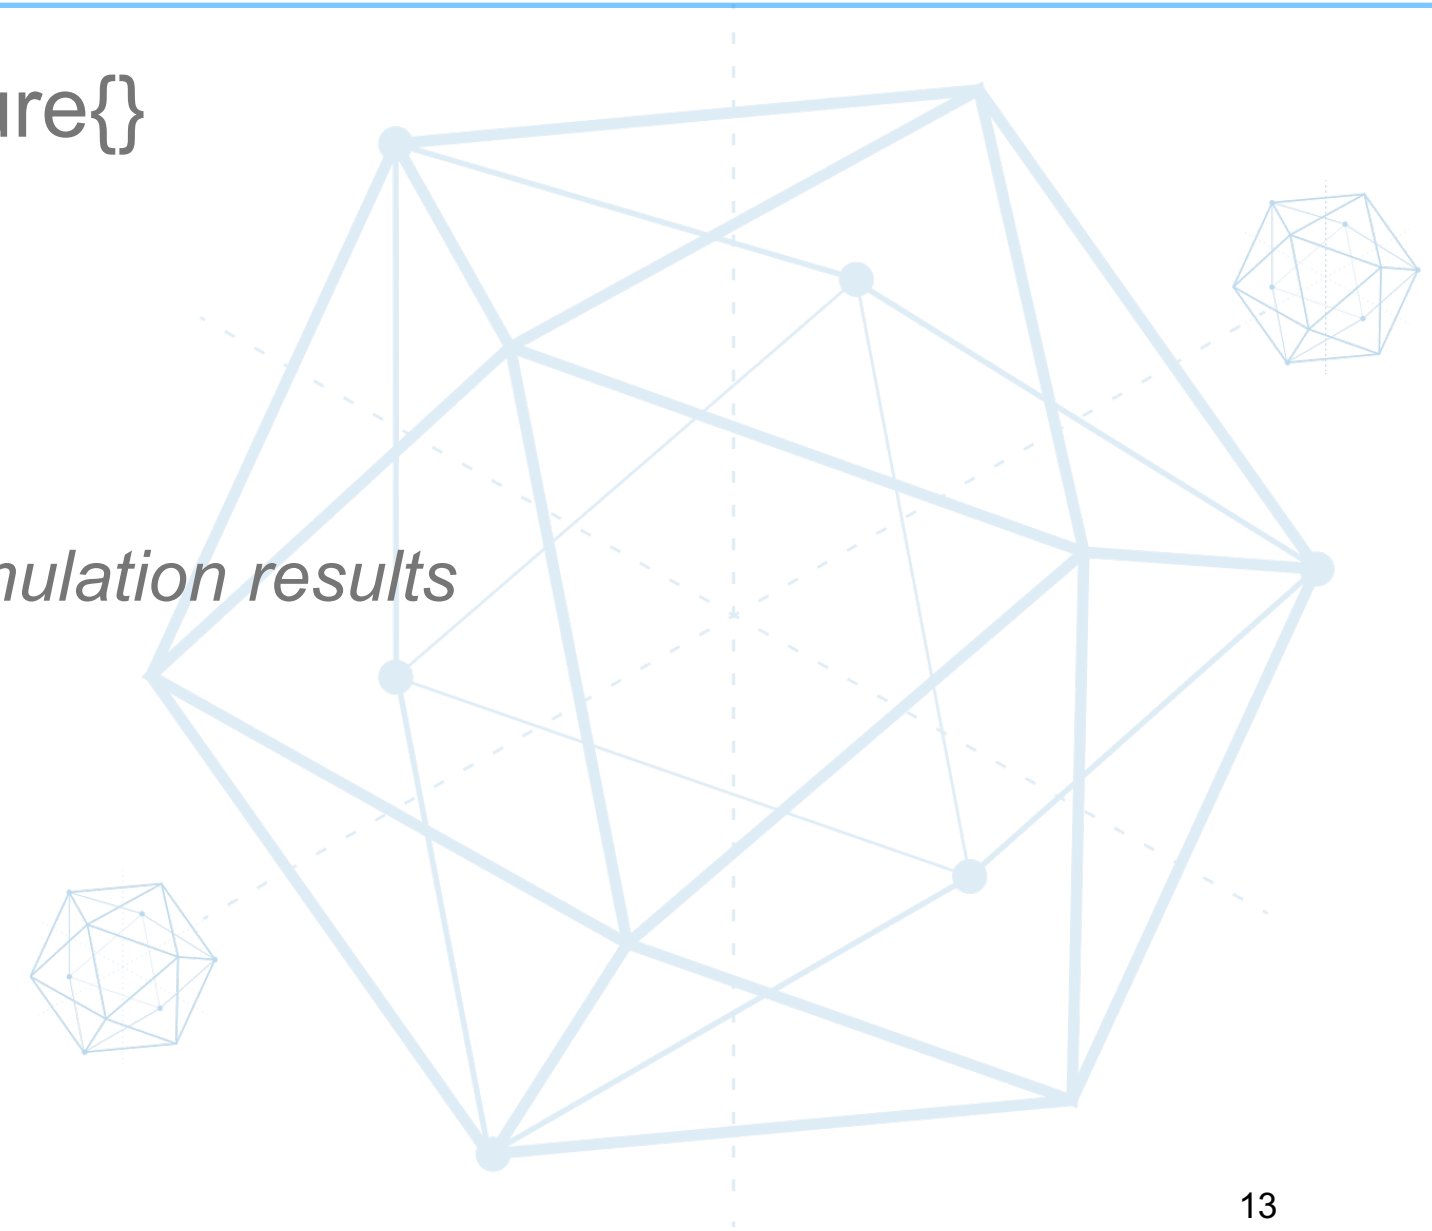
Configuration System ChainCode

- PeerConfiger{}
  - Handle those configuration transactions
- Init()
- Invoke()
  - JoinChain: *peer join into a chain*
  - UpdateConfigBlock: *update the configuration*
  - GetConfigBlock: *get the configuration block data*
  - GetChannels: *returns information about all channels for this peer*



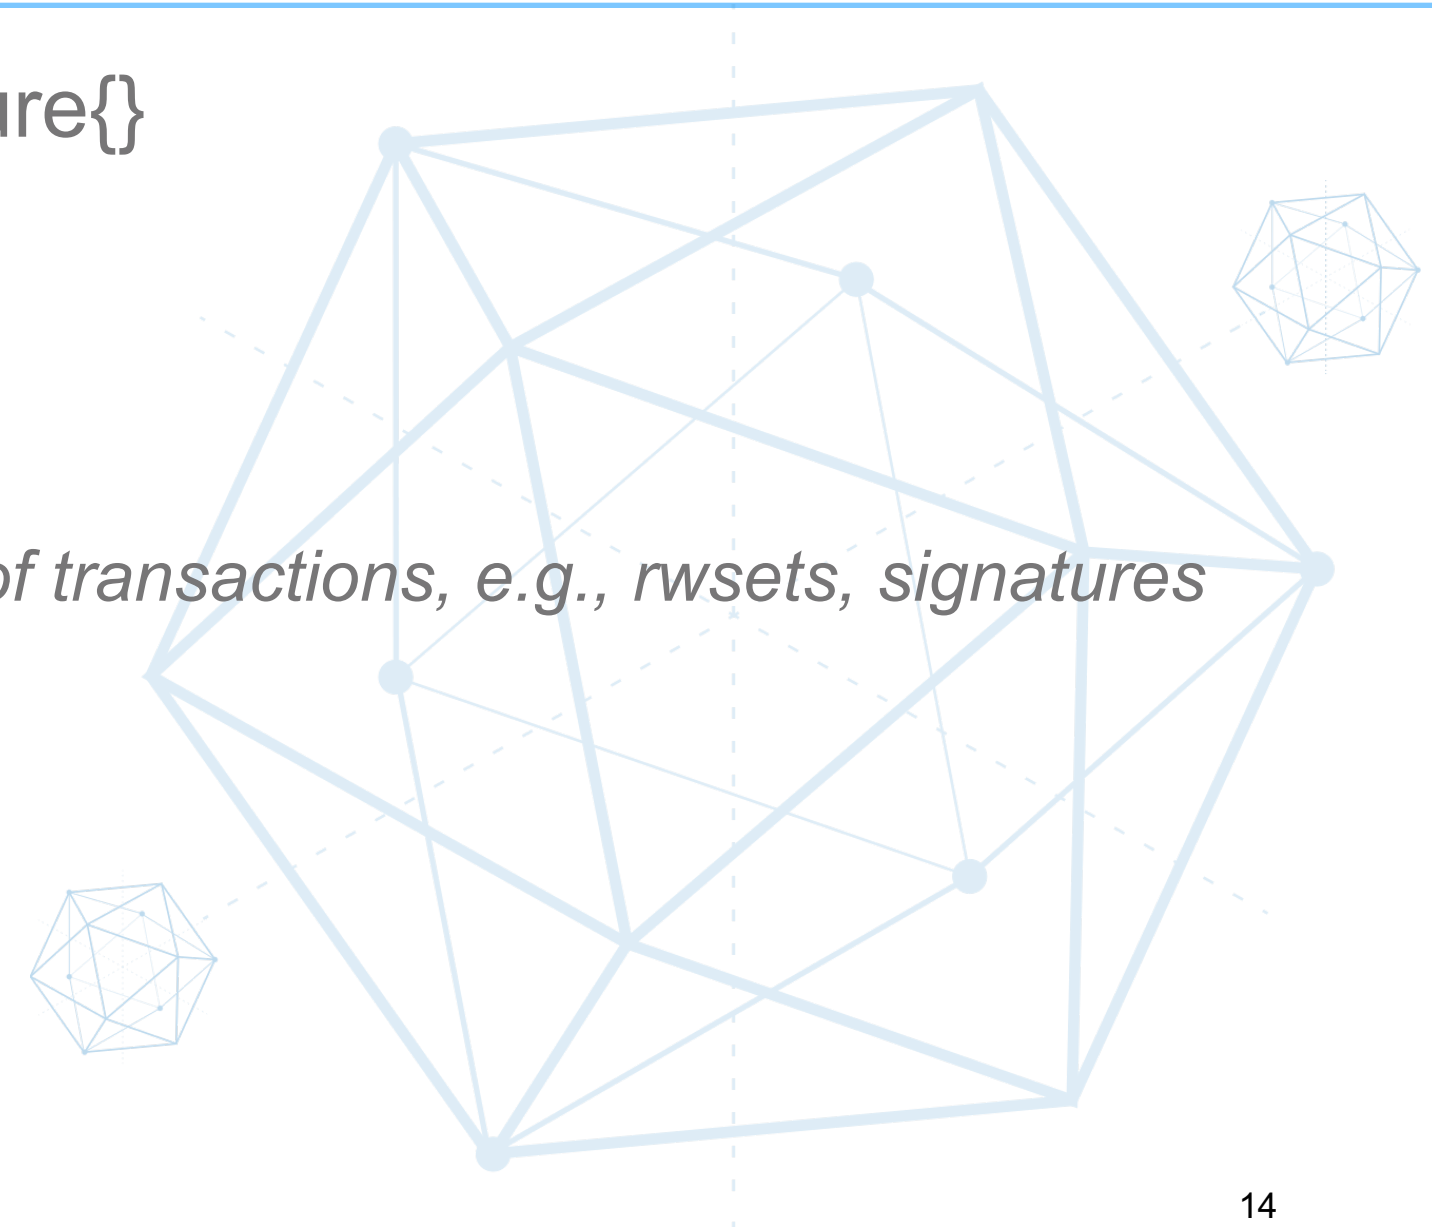
Endorsement System ChainCode

- EndorserOneValidSignature{}
  - Endorsement process
- Init()
- Invoke()
  - *sign another chaincode's simulation results*



Validation System ChainCode

- EndorserOneValidSignature{}
  - Validation process
- Init()
- Invoke()
  - *validate the specified block of transactions, e.g., rwsets, signatures*

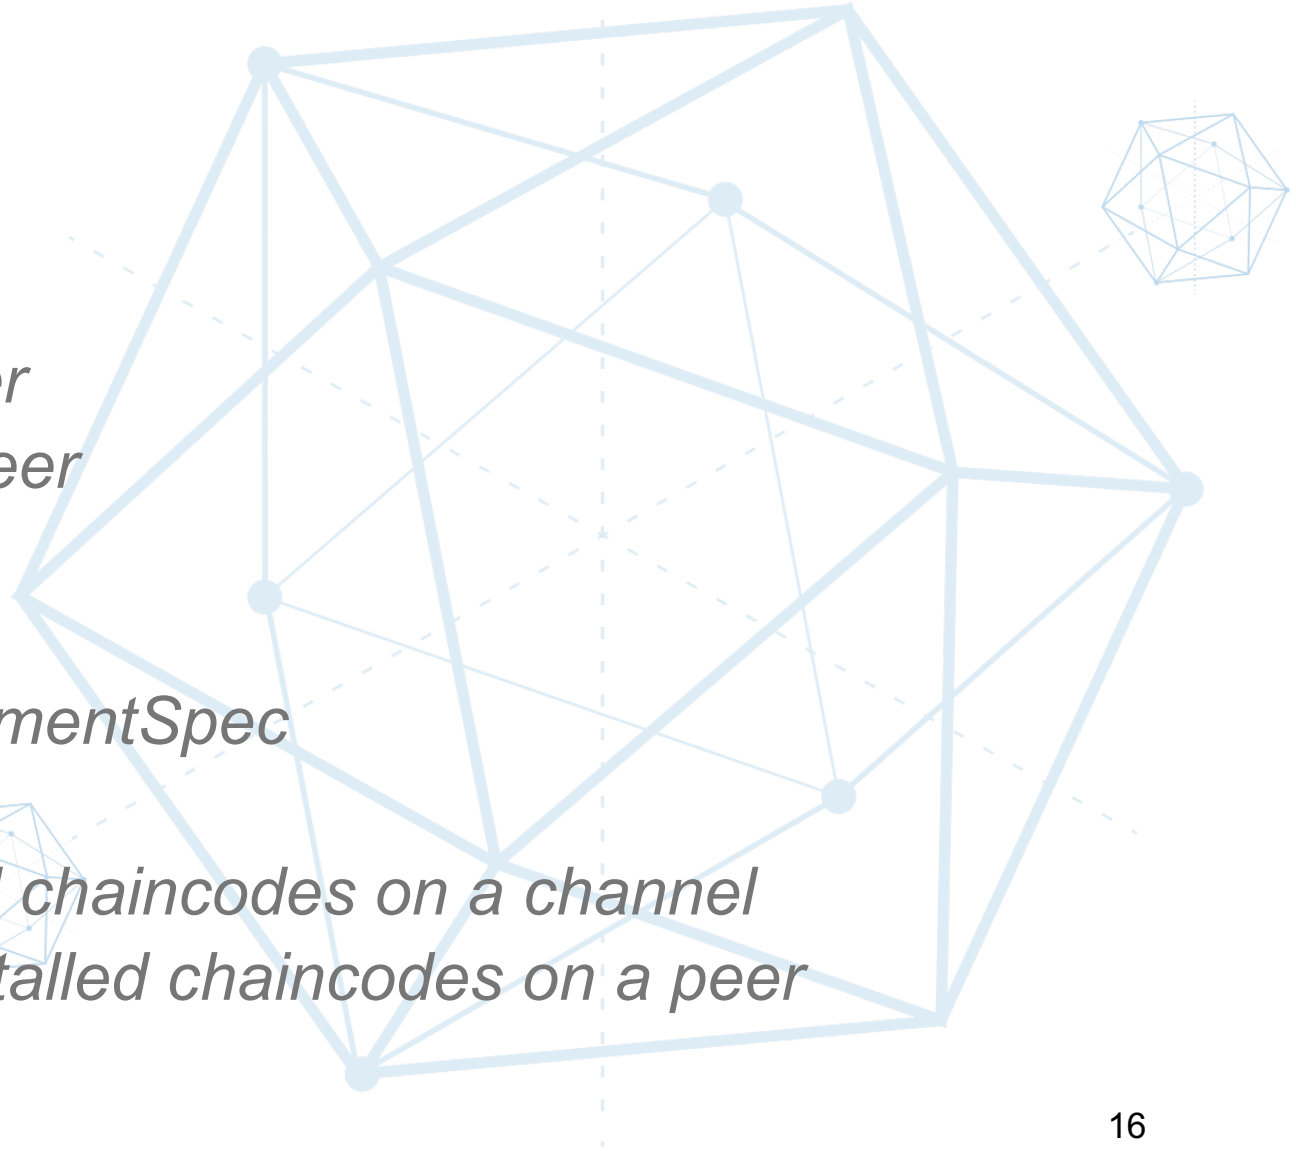


Query System ChainCode

- LedgerQuerier{}
  - Ledger query functions
- Init()
- Invoke()
  - *GetChainInfo: Get information of a chain*
  - GetBlockByNumber: Get the block data by its number
  - GetBlockByHash: Get the block data by its hash value
  - GetTransactionByID: Get the transaction data by its id
  - GetBlockByTxID: Get the block data by contained transaction id

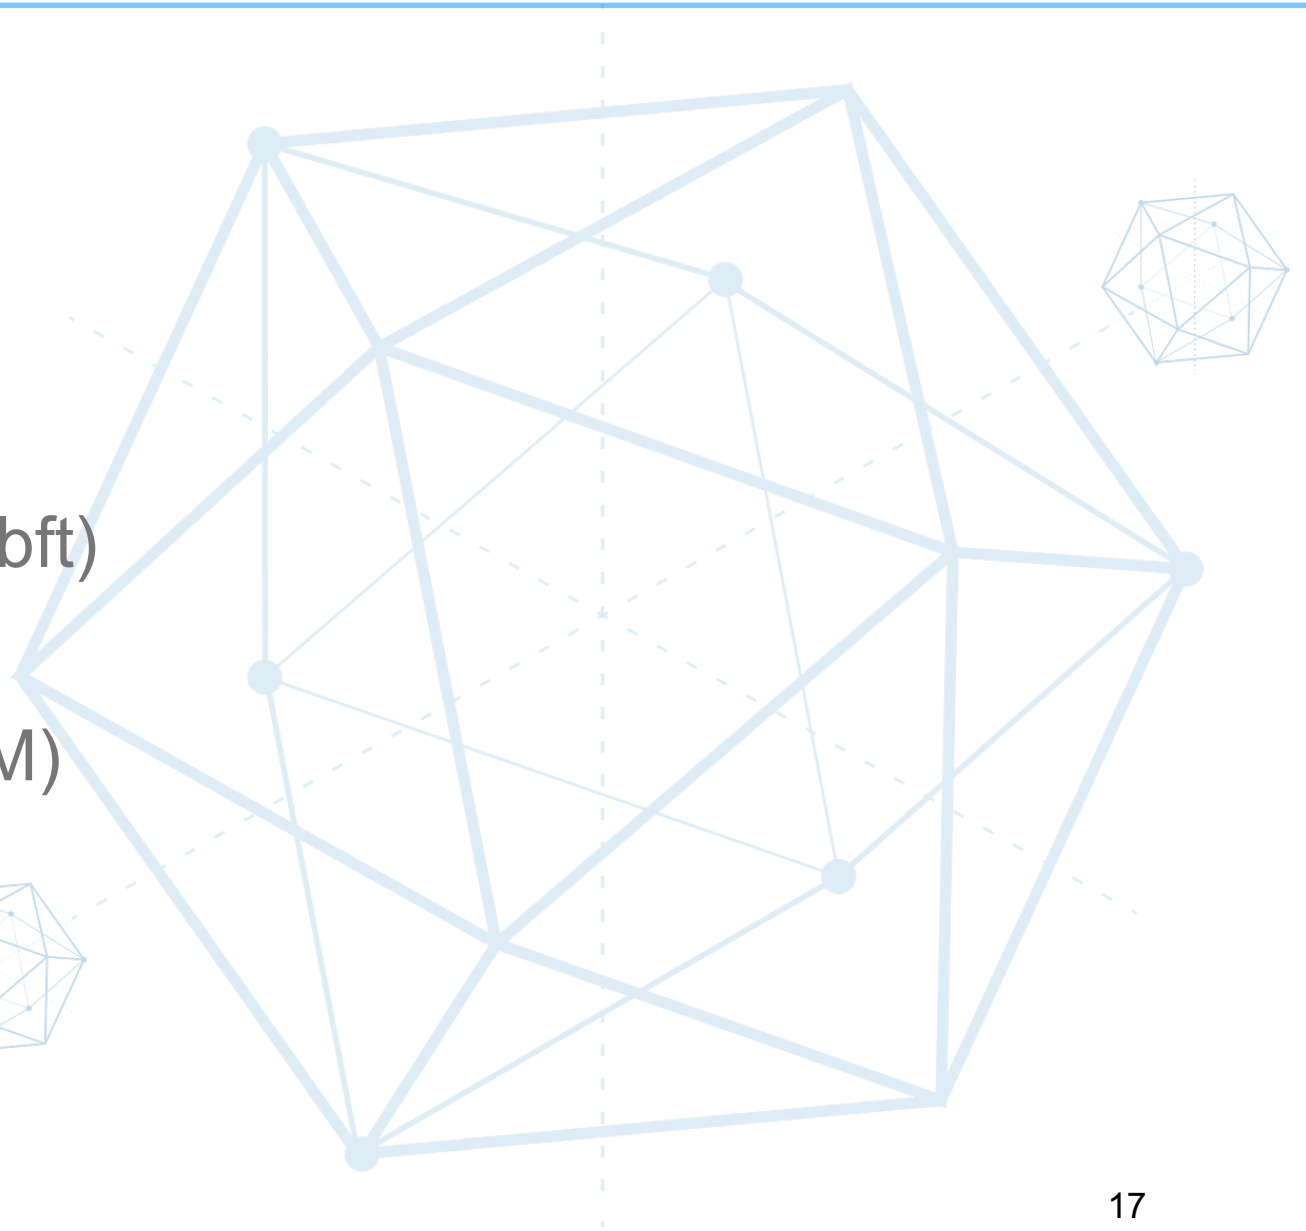
Life-cycle System ChainCode

- EndorserOneValidSignature{}
  - Endorsement process
- Init()
- Invoke()
  - install: *install a chaincode on a peer*
  - deploy: *deploy a chaincode on a peer*
  - upgrade: *upgrade a chaincode*
  - getid: *get chaincode info*
  - getdepspec: *get ChaincodeDeploymentSpec*
  - getccdata: *get ChaincodeData*
  - getchaincodes: *get the instantiated chaincodes on a channel*
  - getinstalledchaincodes: *get the installed chaincodes on a peer*

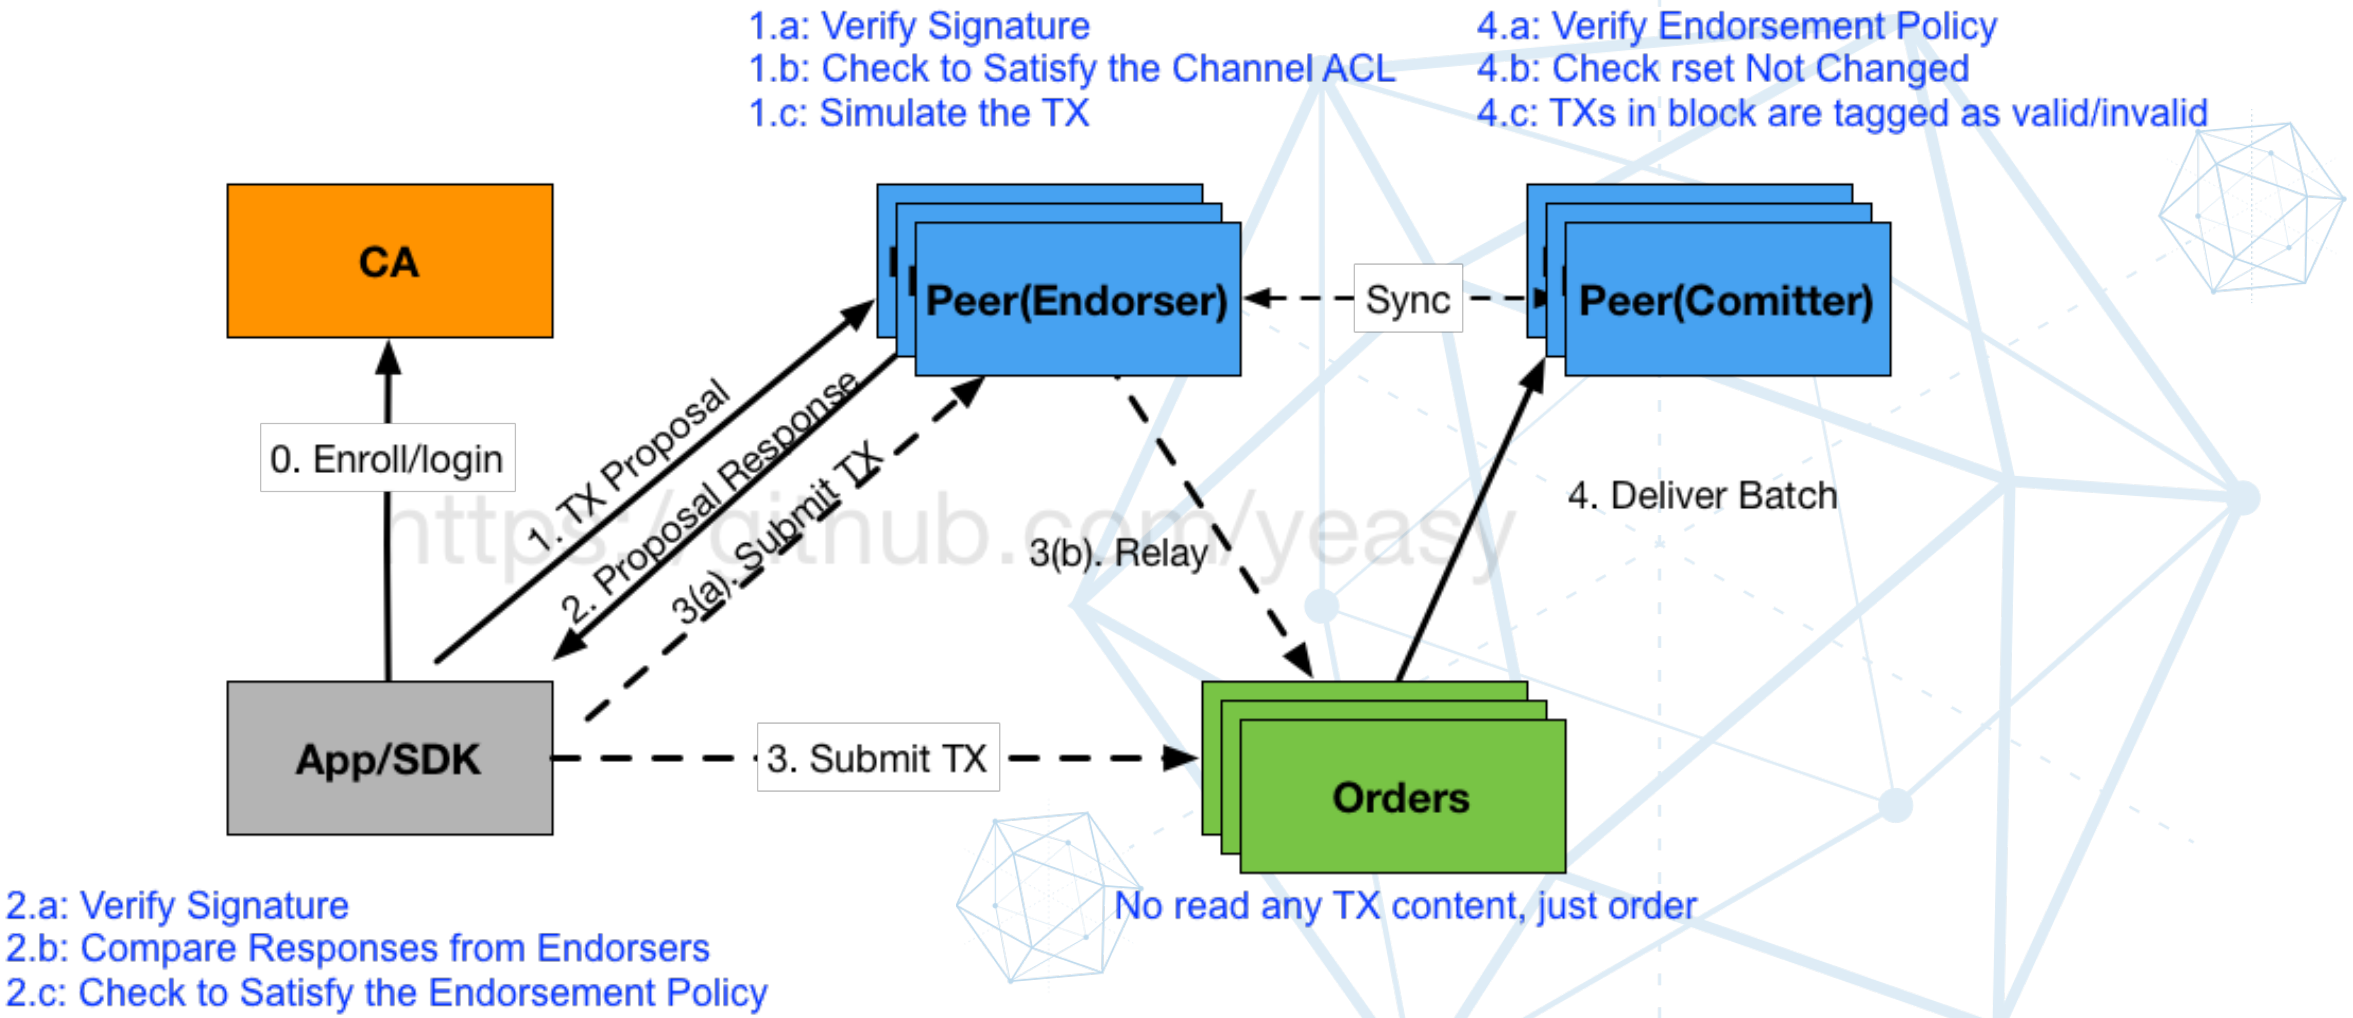


Pluggable Components

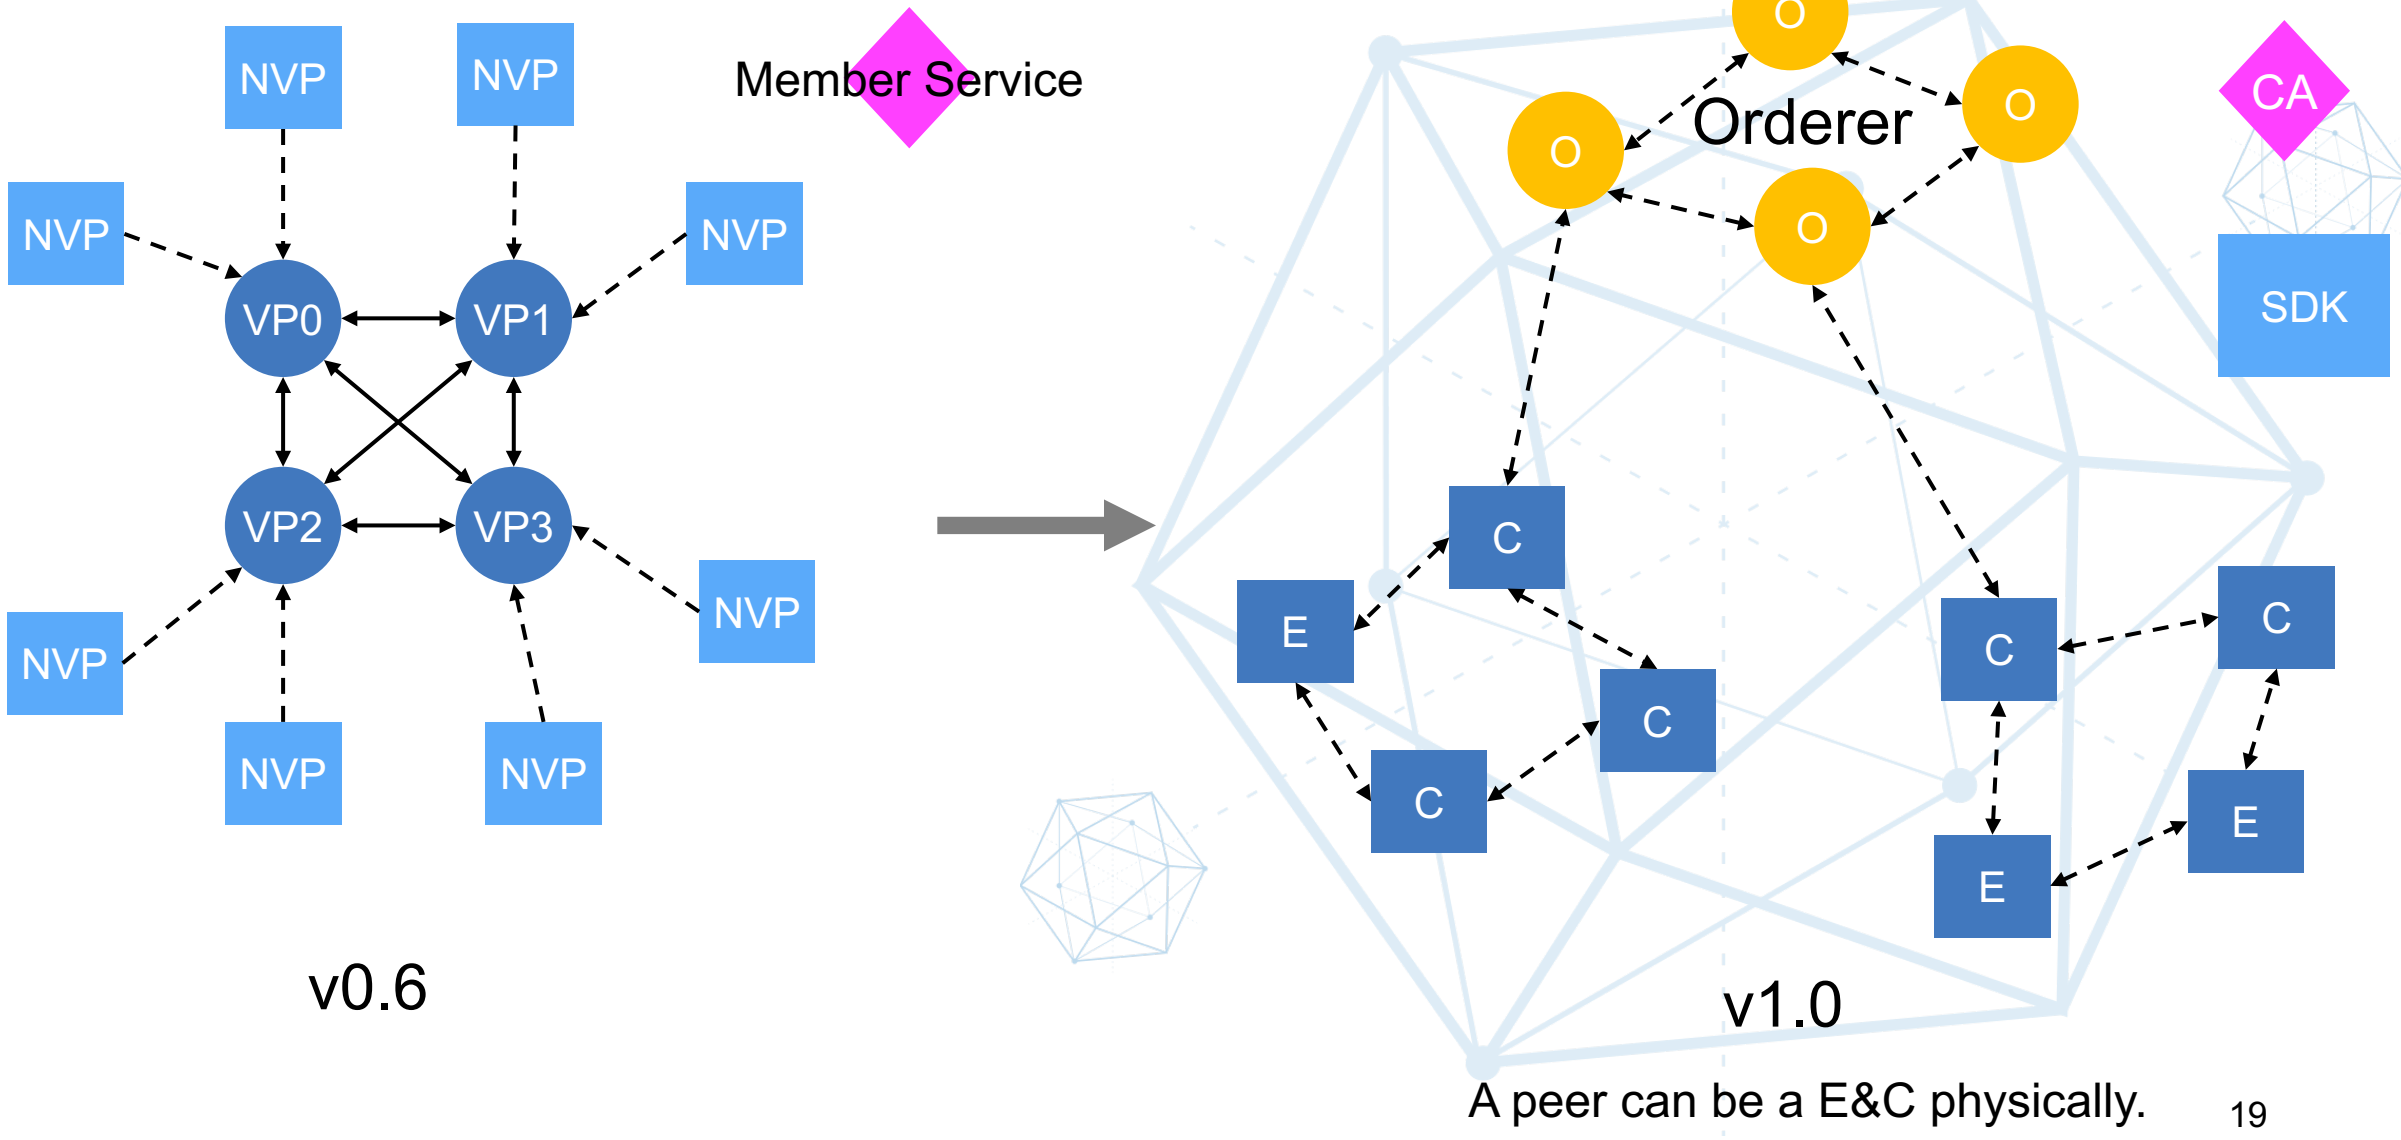
- Modular and Pluggable
  - Membership Services (CA)
  - SDKs (node, python, java, go)
  - Endorsement
  - Consensus service (solo, kafka, bft)
  - Ledger
  - Crypto algorithms (software, HSM)



Fabric 1.0 Workflow



Fabric 1.0 Deployment Scenarios



A peer can be a E&C physically.

Hyperledger Fabric Roadmap

Hack Fest docker images

- **60 participates tested**
- Basic v1 architecture in place
- Add / Remove Peers
- Channels
- Node SDK
- Go Chaincode
- Ordering Solo
- Fabric CA

V1 Alpha *

- Docker images
- Tooling to bootstrap network
- Fabric CA or bring your own
- Java and Node SDKs
- Ordering Services - Solo and Kafka
- Endorsement policy
- Level DB and Couch DB
- Block dissemination across peers via Gossip

V1 GA *

- Hardening, usability, serviceability, load, operability and stress test
- Java Chaincode
- Chaincode ACL
- Chaincode packaging & LCI
- Pluggable crypto
- HSM support
- Consumability of configuration
- Next gen bootstrap tool (config update)
- Config transaction lifecycle
- Eventing security
- Cross Channel Query
- Peer management APIs
- Documentation

V Next *

- SBFT
- Archive and pruning
- System Chaincode extensions
- Side DB for private data
- Application crypto library
- Dynamic service discovery
- REST wrapper
- Python SDK
- Identity Mixer (Stretch)
- Tcerts

2016/17 December | March | June | Future

Connect-a-thon

- 11 companies in Australia, Hungary, UK, US East Coast, US West Coast, Canada dynamically added peers and traded assets

Connect-a-cloud

- Dynamically connecting OEM hosted cloud environments to trade assets

HYPERLEDGER
BLOCKCHAIN TECHNOLOGIES FOR BUSINESS

*** Dates for Alpha, Beta, and GA are determined by Hyperledger community and are currently proposals.**

Proposed Alpha detailed content:
