

# Hyperledger Fabric Architecture and Design

Baohua Yang  
April, 2017

# About Me

- **Researcher in IBM**
  - Fintech, Cloud and Analytics
- **Open-Source contributor**
  - [Hyperledger](#), [OpenStack](#), [OpenDaylight](#), etc.
- **Hyperledger developer**
  - Code committer to [fabric](#), [sdk](#), [Cello](#) etc.
  - PTL of [Cello](#) project and [fabric-sdk-py](#) project
  - Chair of [Hyperledger Technical Working Group China](#)
  - Drafter of [fabric sdk spec](#) and [multi-channel consensus spec](#)

# Hyperledger Fabric

- Open-sourced at Dec, 2015
- Proposed by IBM and DASH
- Written in Golang
- 70+ contributors
- 4000+ commits
- v0.6: ~80k loc; v1.0: ~310k loc
- Active now, in 1.0 pre-release

# Existing Blockchain Technologies

- Limited Throughput
- Slow Transaction Confirmation
- Designed for Cryptocurrency
- Poor Governance
- No Privacy
- No Settlement Finality
- Anonymous Processors
- ...

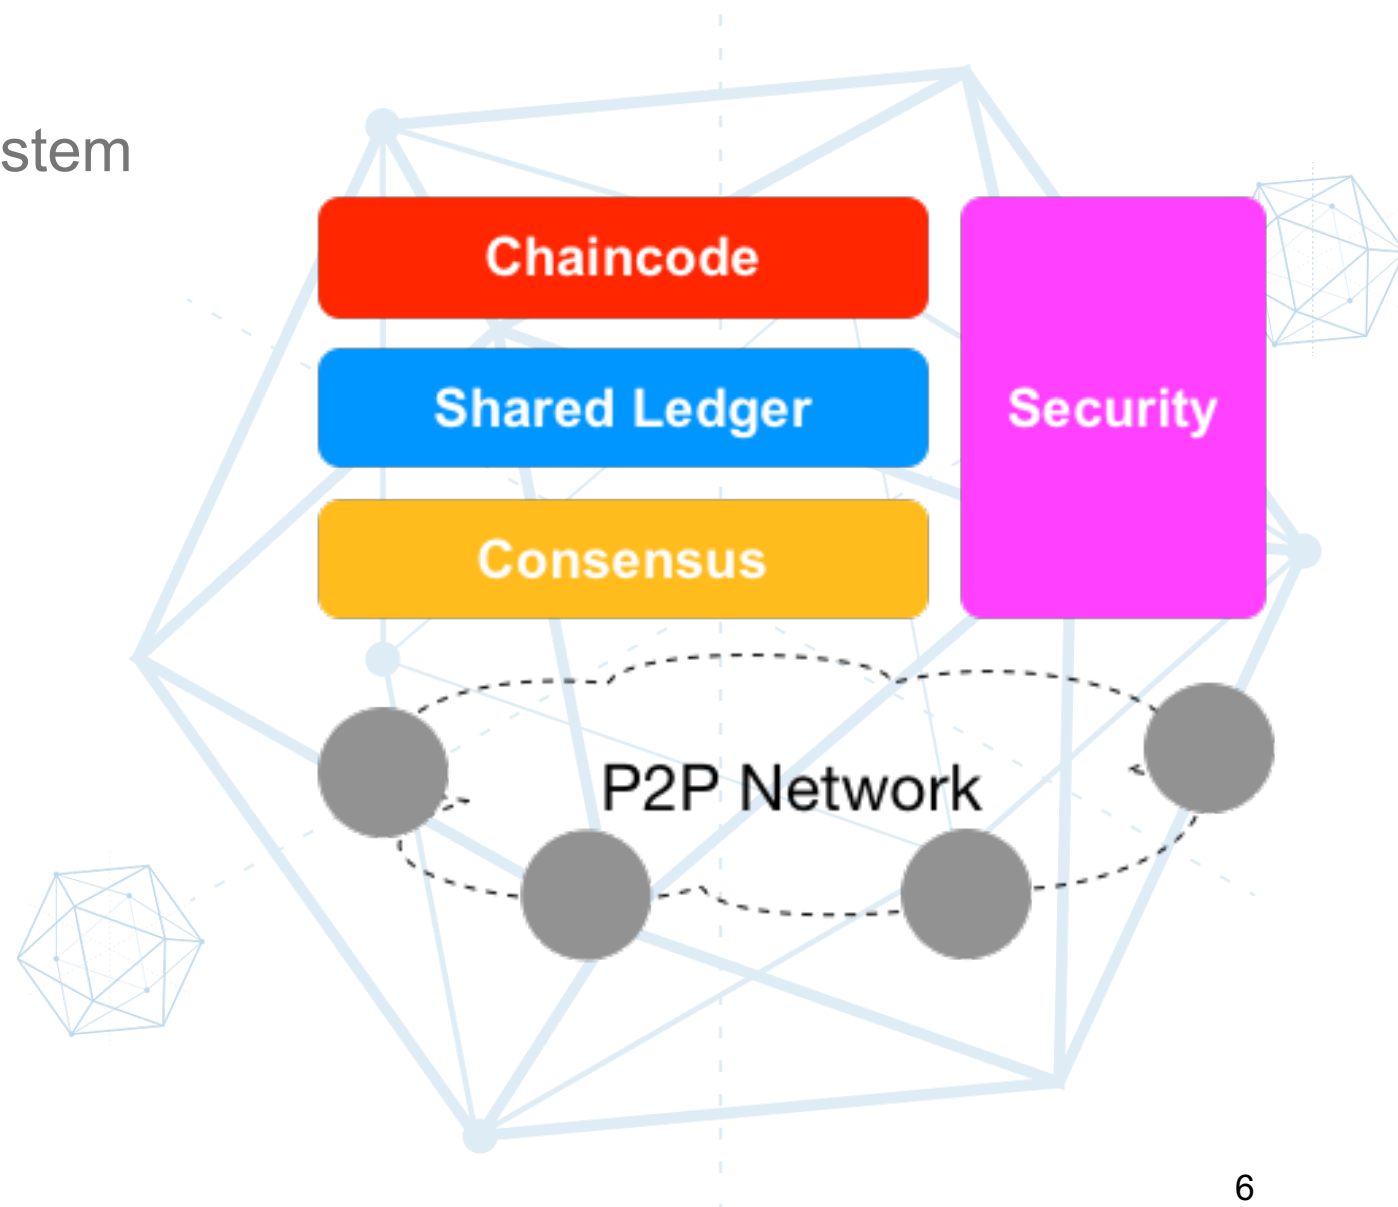

# Hyperledger Fabric: Ledger for Enterprise

- Privacy, Confidentiality, Auditability, Performance and Scalability
- Permissioned with better trust among members, while enable optimized consensus
- Open protocol/standard with open-source code

# Fabric Main Components

- Shared Ledger
  - Append-only distributed record system
  - Blocks + States
- Smart Contract (Chaincode)
  - Business logics with transactions
  - Stateless and deterministic
- Consensus
  - Verified and ordered transactions
- Security
  - Access control
  - Privacy protection
  - Verification
  - CA

# Fabric 1.0 Key Design

- Node Functionality Decouple
- Multi-Channel/Chain
- Consensus
- Permission and Privacy
- System Chaincode
- Pluggable Components

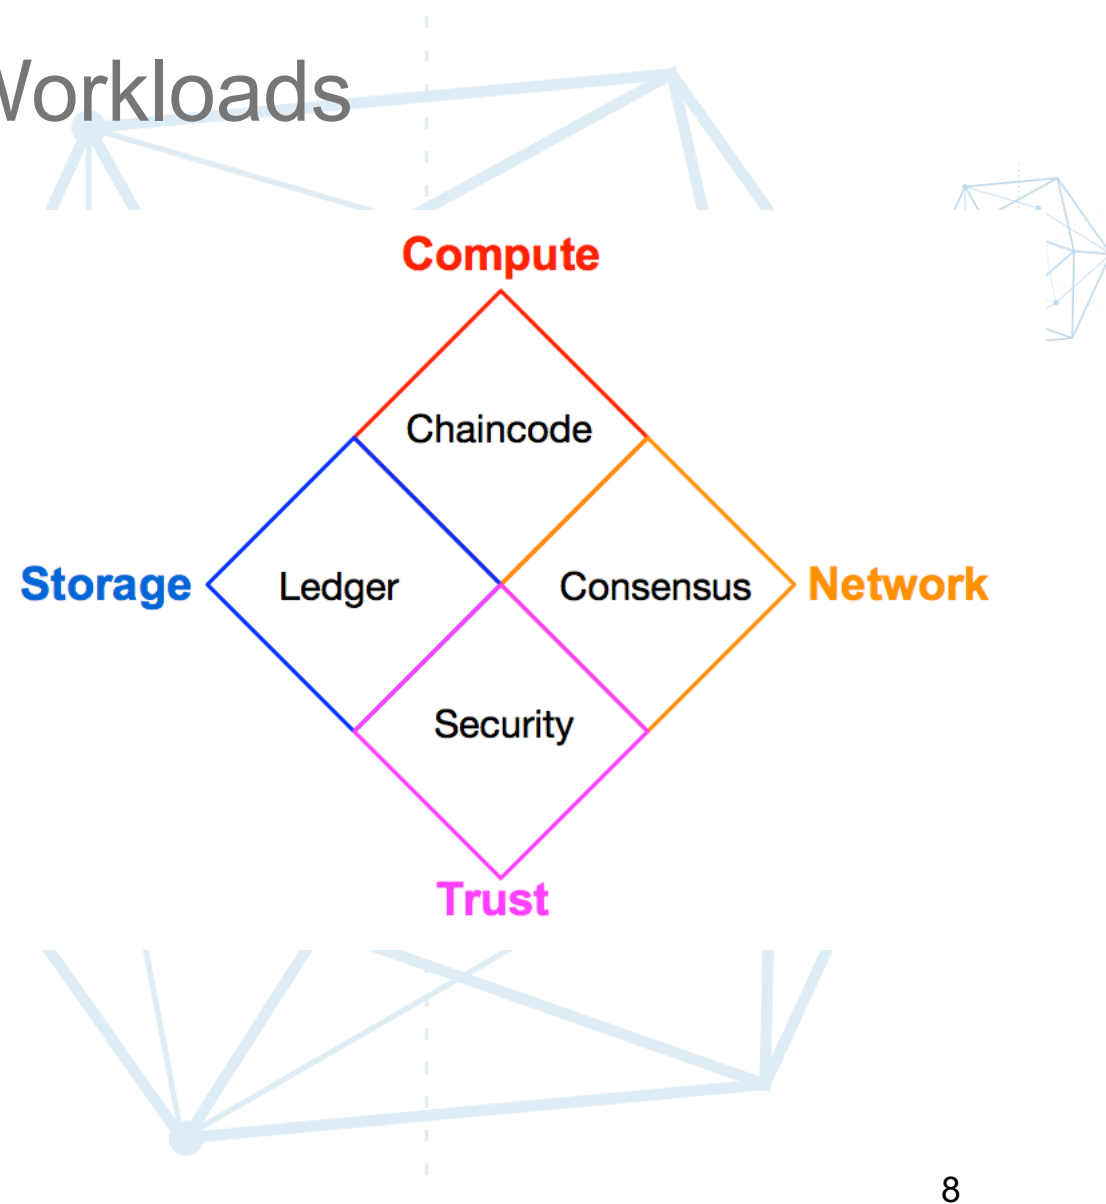

# Node Functionality Decouple

- Various Intensive Requirements/Workloads

- Chaincode: **Compute** intensive
- Shared Ledger: **Storage** intensive
- Consensus: **Network** intensive
- Security: **Trust** intensive

- Decouple Full-functional Nodes

- **Endorser**: Endorse TX proposal
- **Committer**: Write down block
- **Orderer**: Only order, no TX aware
- **CA**: Certificate management

# Multi-Channel/Chain

- Isolate the transactions, ledgers between organizations – Overlay Network
- Peer can join channels accordingly

# Consensus

- Full-circle verification of the correctness of a set of transactions comprising a block
  - Endorsement policy
  - MVCC validation on RW sets
  - Ordering
  - ACL
- Orderer
  - Solo, Kafka, BFT, and more...
  - Broadcast(blob), Deliver(seqno, prevhash, blob)

# Permission and Privacy

- Permission at Various Levels

- Network, channel, transaction

- Privacy for Business

- Anonymity

- Un-linkability

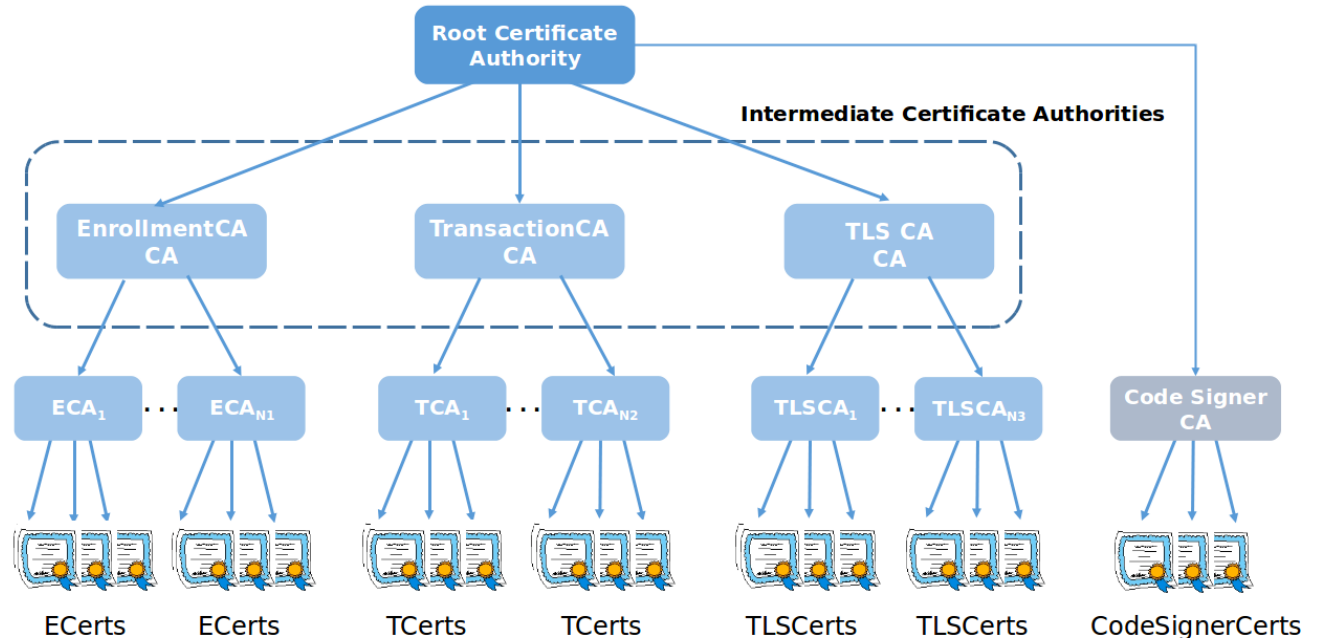

- Auditability and Accountability

- Fabric CA (PKI)

- Identity Registration Management

- Enrollment Cert (Ecert) and Transaction Cert (Tcert)

Public Key Infrastructure - Hierarchy

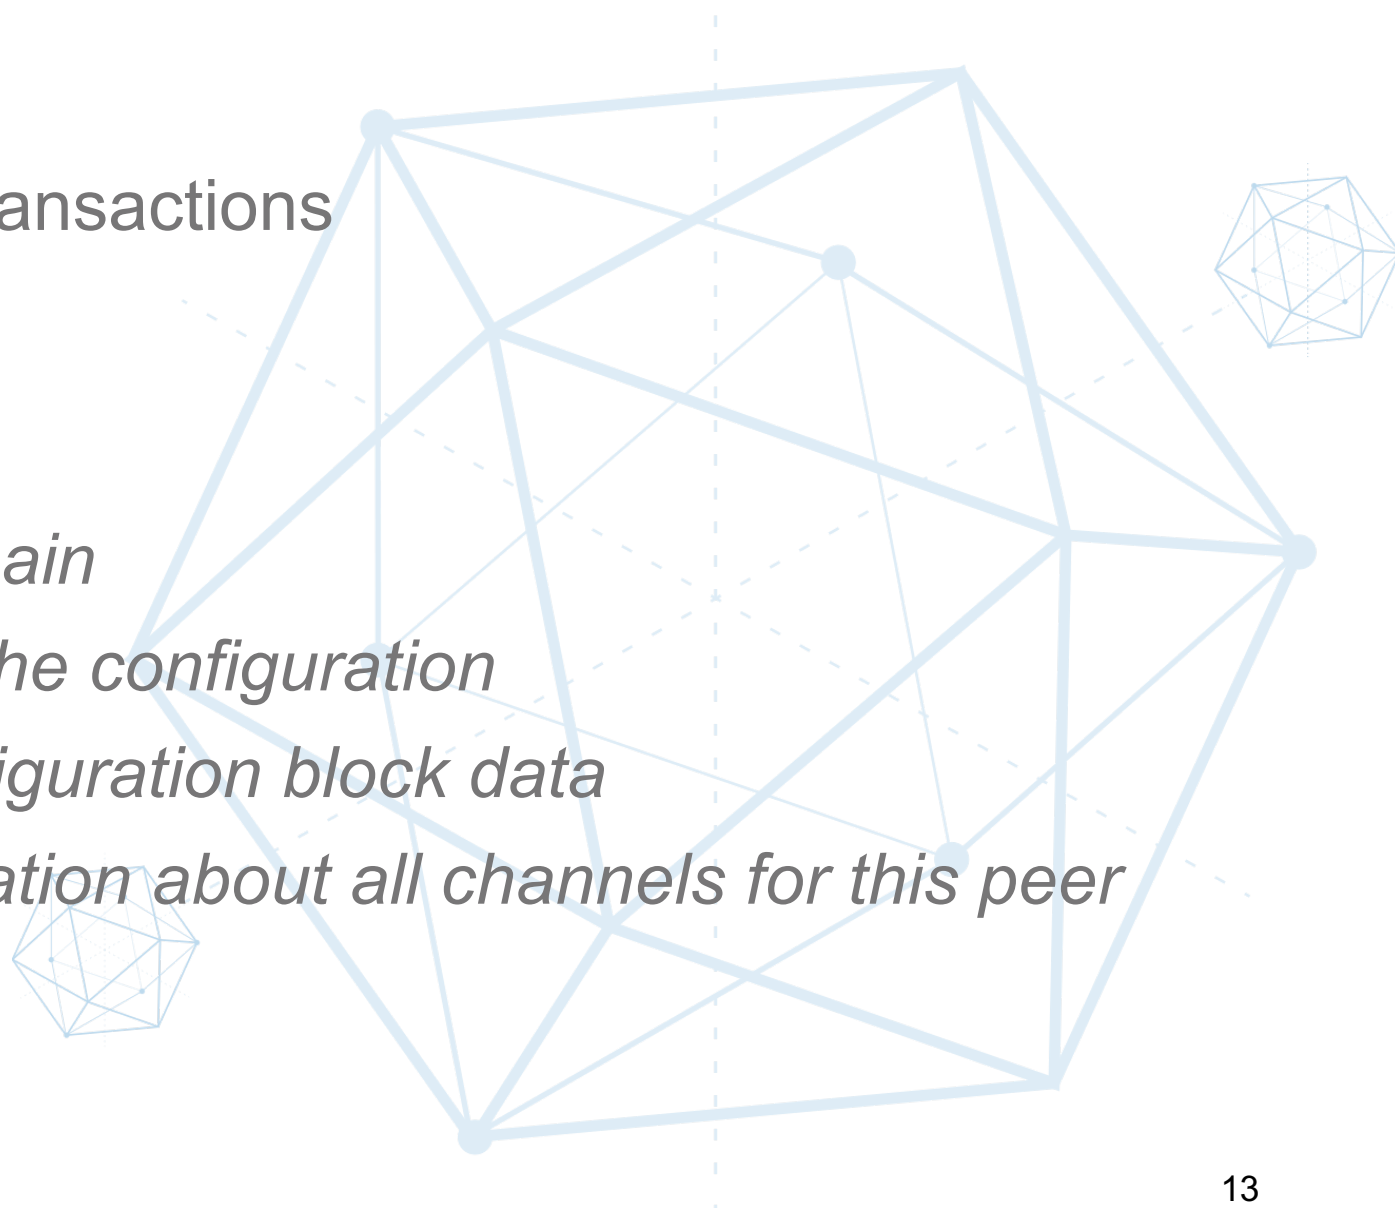

# System Chaincode

- Handle system operations, running on peers natively.
  - Configuration System Chaincode (csc)
  - Endorsement System Chaincode (esc)
  - Validation System Chaincode (vsc)
  - Query System Chaincode (qsc)
  - Life-cycle System Chaincode (lsc)

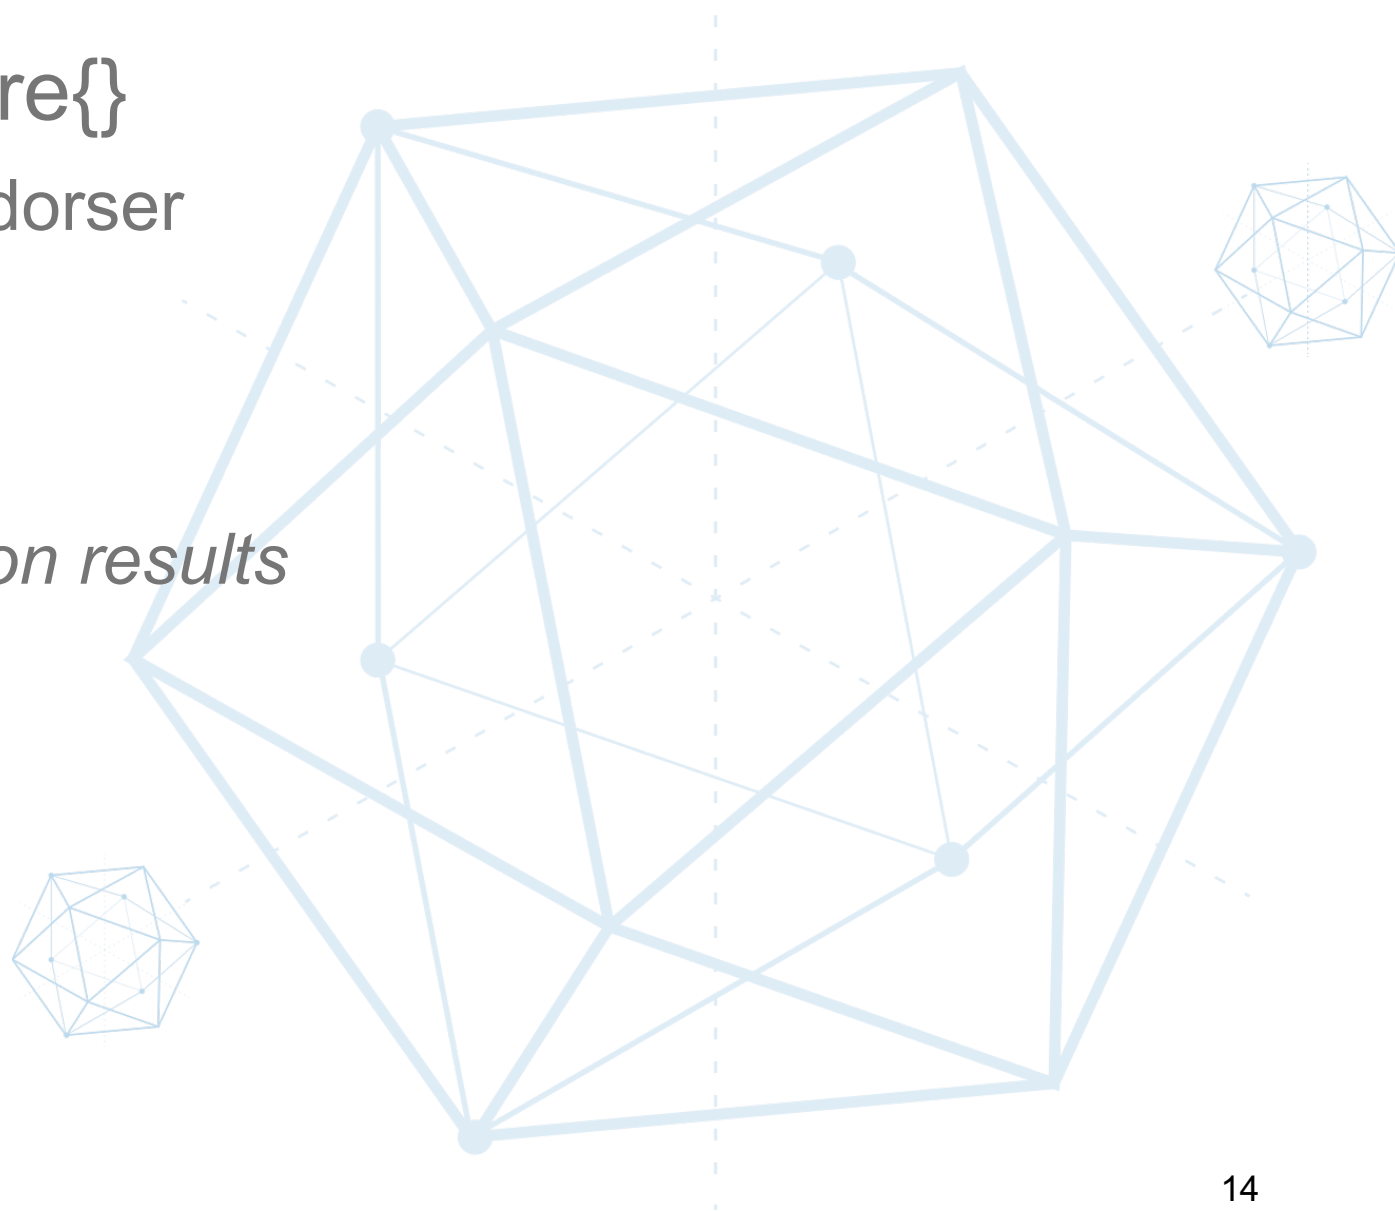

# Configuration System ChainCode

- PeerConfiger{}
  - Handle those configuration transactions
- Init()
- Invoke()
  - JoinChain: *peer join into a chain*
  - UpdateConfigBlock: *update the configuration*
  - GetConfigBlock: *get the configuration block data*
  - GetChannels: *returns information about all channels for this peer*

# Endorsement System ChainCode

- EndorserOneValidSignature{
  - Endorsement process on Endorser
- Init()
- Invoke()
  - *Sign on chaincode's simulation results*
  - *More explicit rules (TBD)*

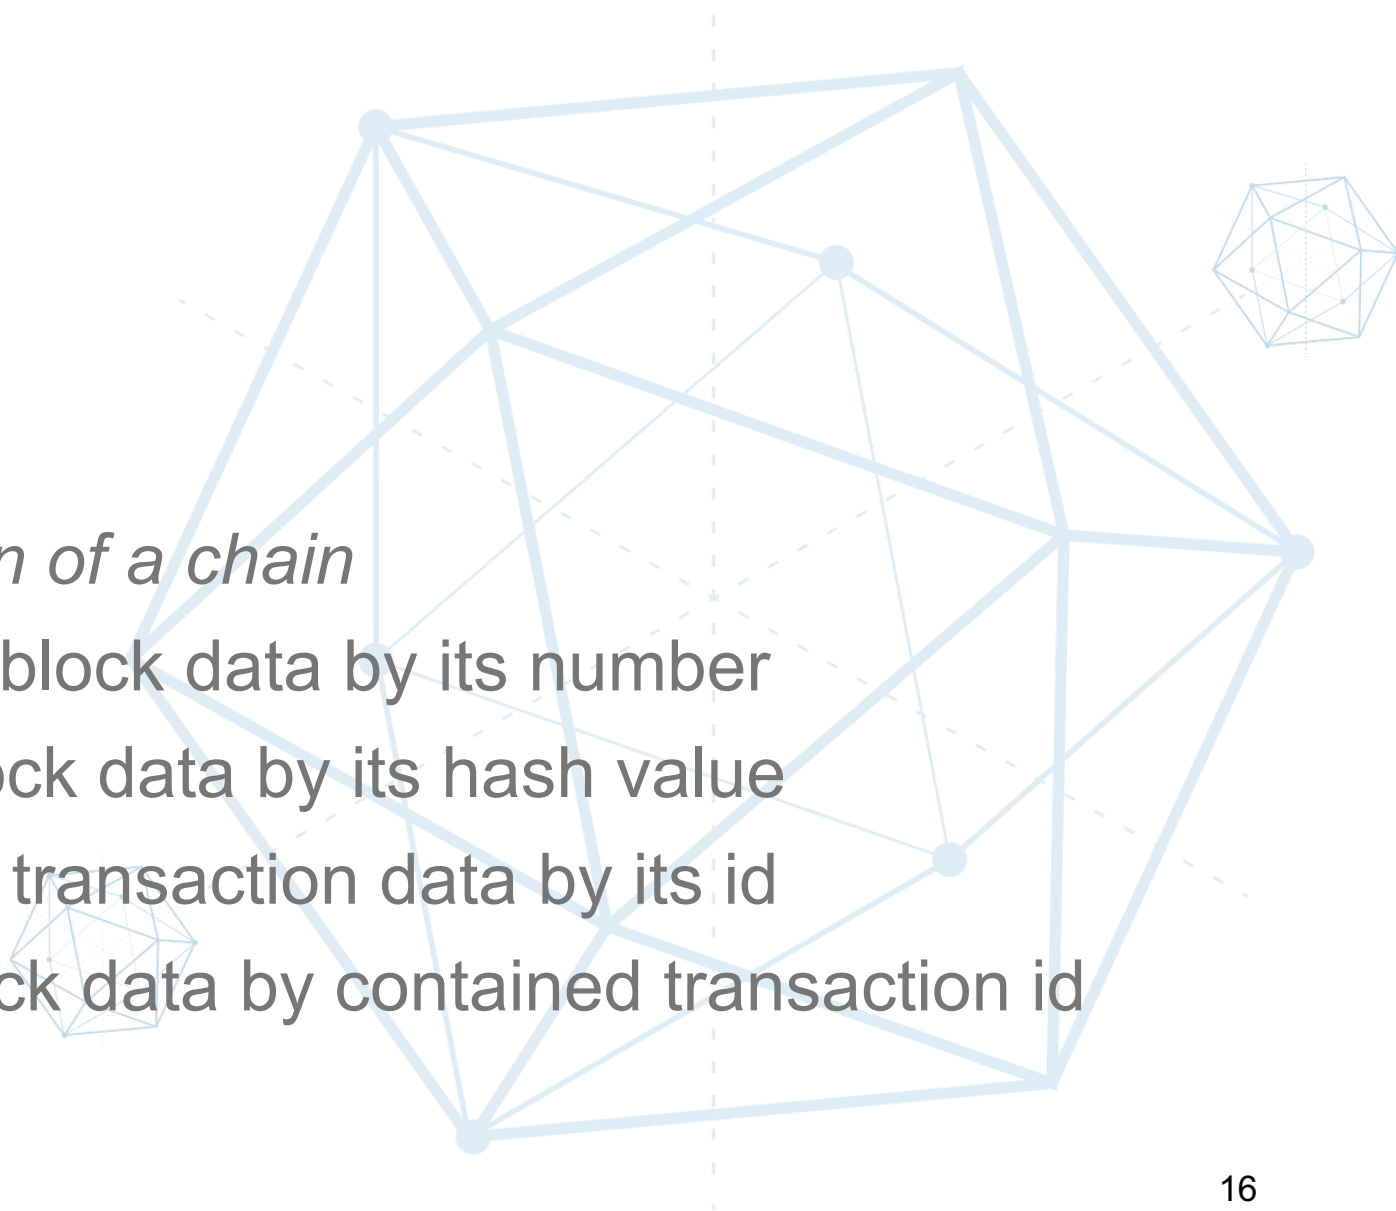

# Validation System ChainCode

- ValidatorOneValidSignature{
  - Validation process on Committer
- Init()
- Invoke()
  - *Validate the specified block of transactions, e.g., rwsets, signatures*

# Query System ChainCode

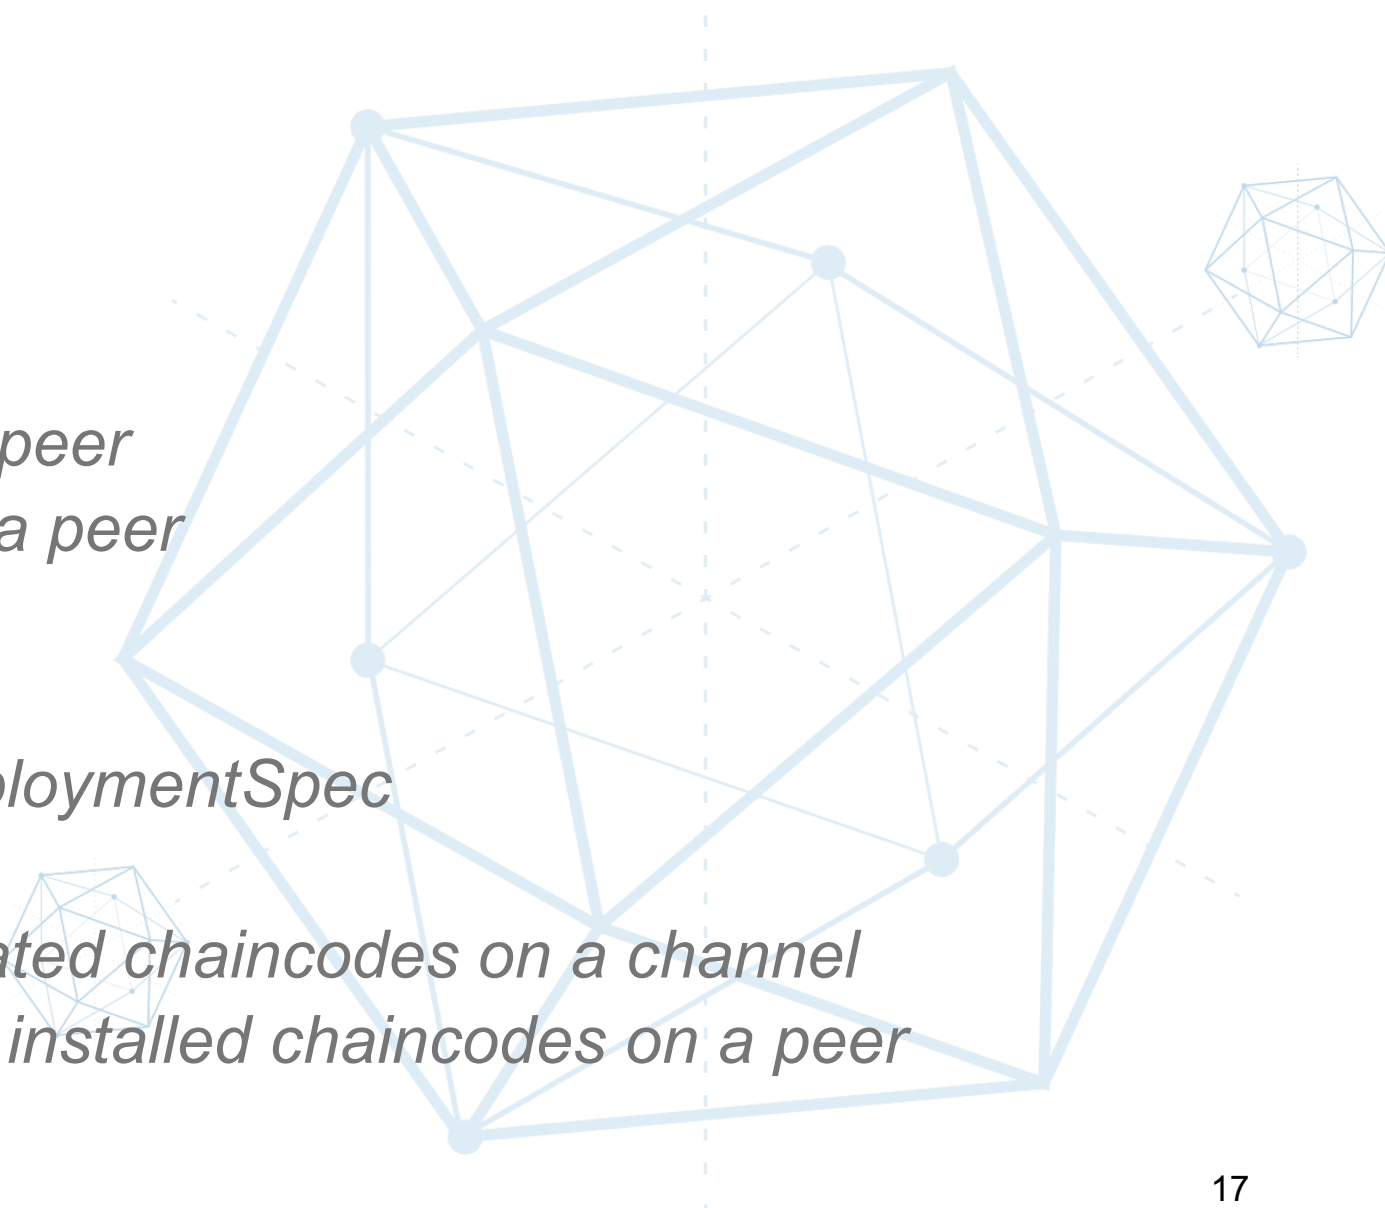

- LedgerQuerier{}
  - Ledger query functions
- Init()
- Invoke()
  - *GetChainInfo*: Get information of a chain
  - *GetBlockByNumber*: Get the block data by its number
  - *GetBlockByHash*: Get the block data by its hash value
  - *GetTransactionByID*: Get the transaction data by its id
  - *GetBlockByTxID*: Get the block data by contained transaction id

# Life-cycle System ChainCode

- LifecycleSysCC{
  - Lifecycle management process
- Init()
- Invoke()
  - install: *install a chaincode on a peer*
  - deploy: *deploy a chaincode on a peer*
  - upgrade: *upgrade a chaincode*
  - getid: *get chaincode info*
  - getdepspec: *get ChaincodeDeploymentSpec*
  - getccdata: *get ChaincodeData*
  - getchaincodes: *get the instantiated chaincodes on a channel*
  - getinstalledchaincodes: *get the installed chaincodes on a peer*

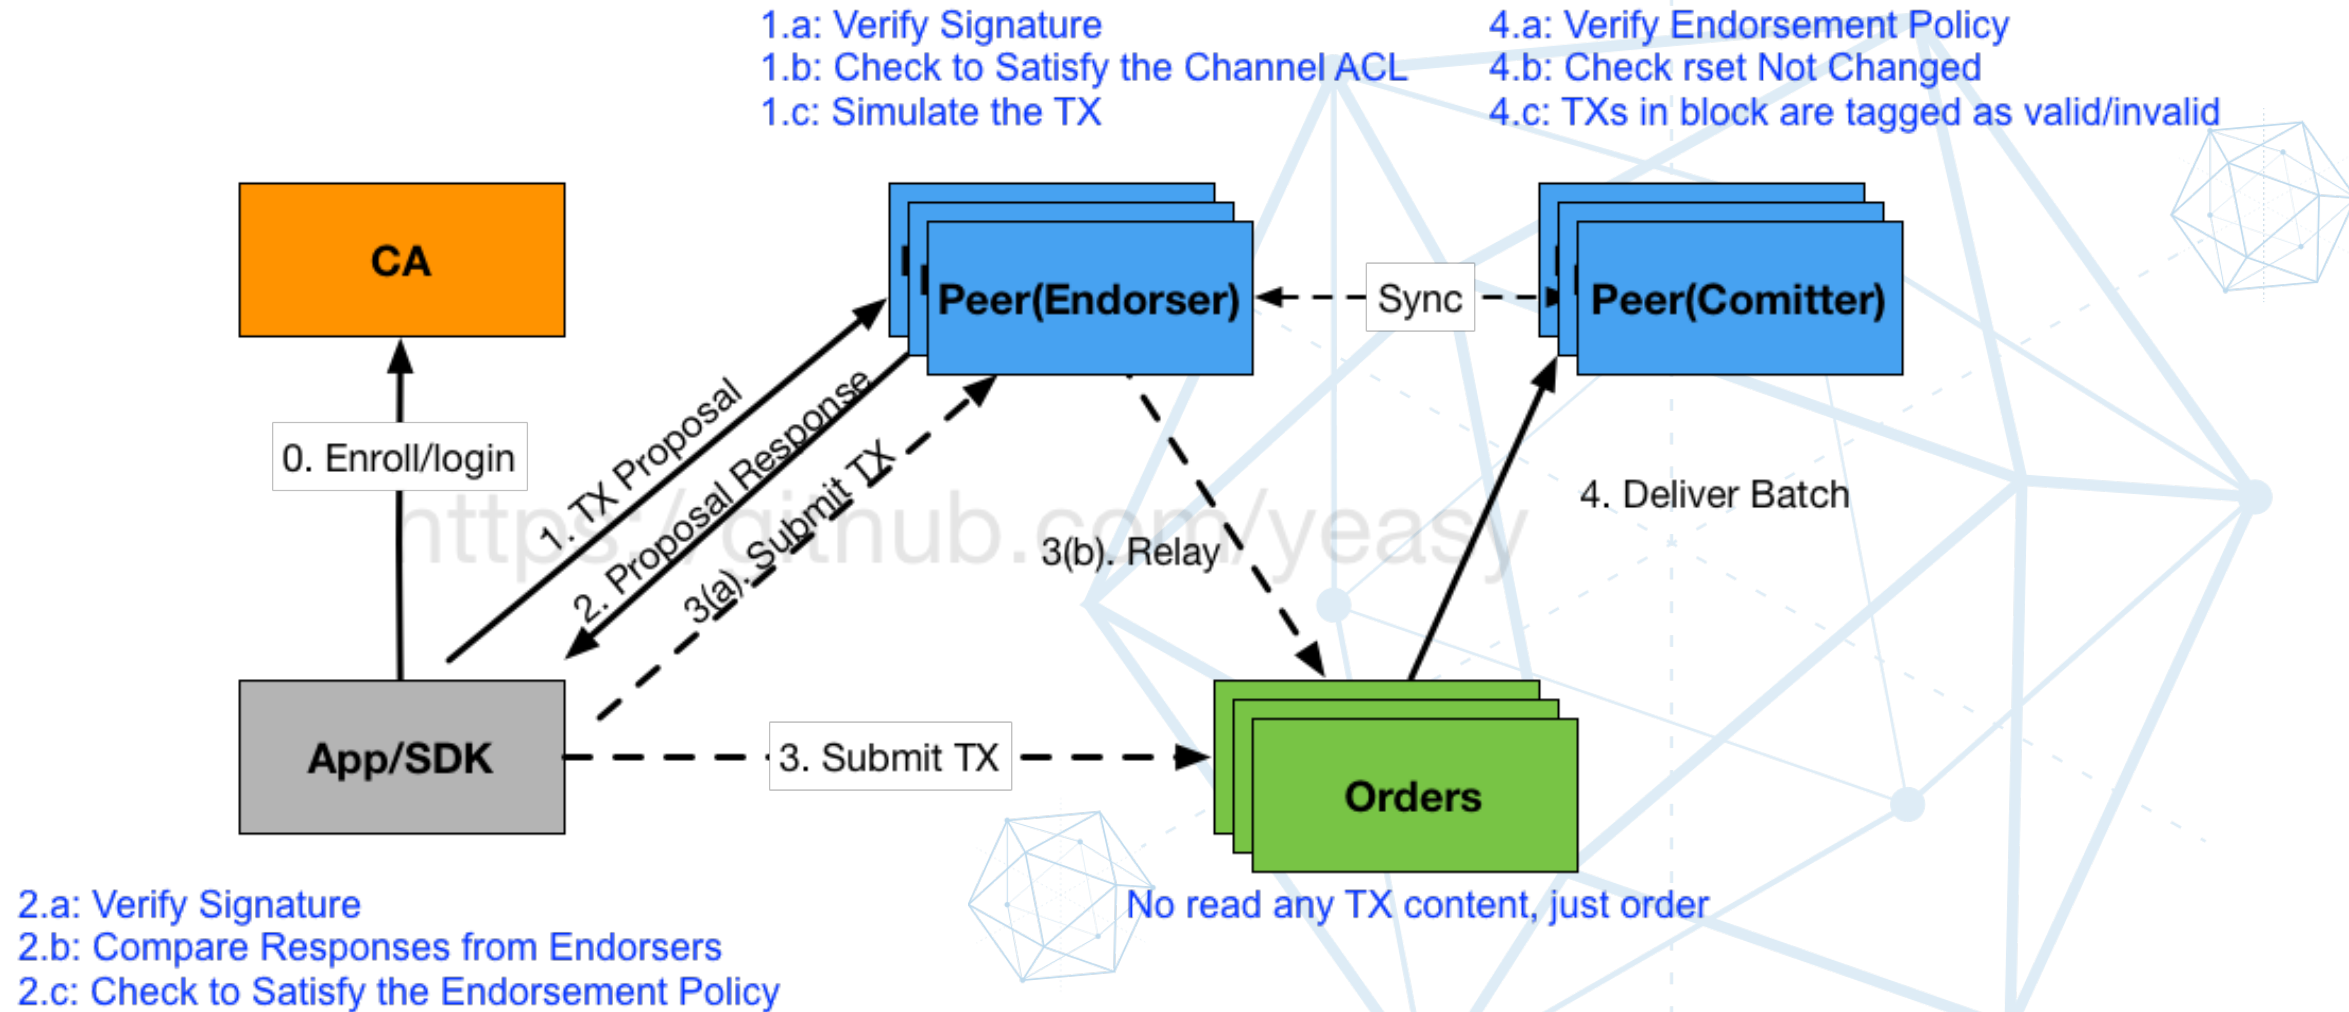

# Pluggable Components

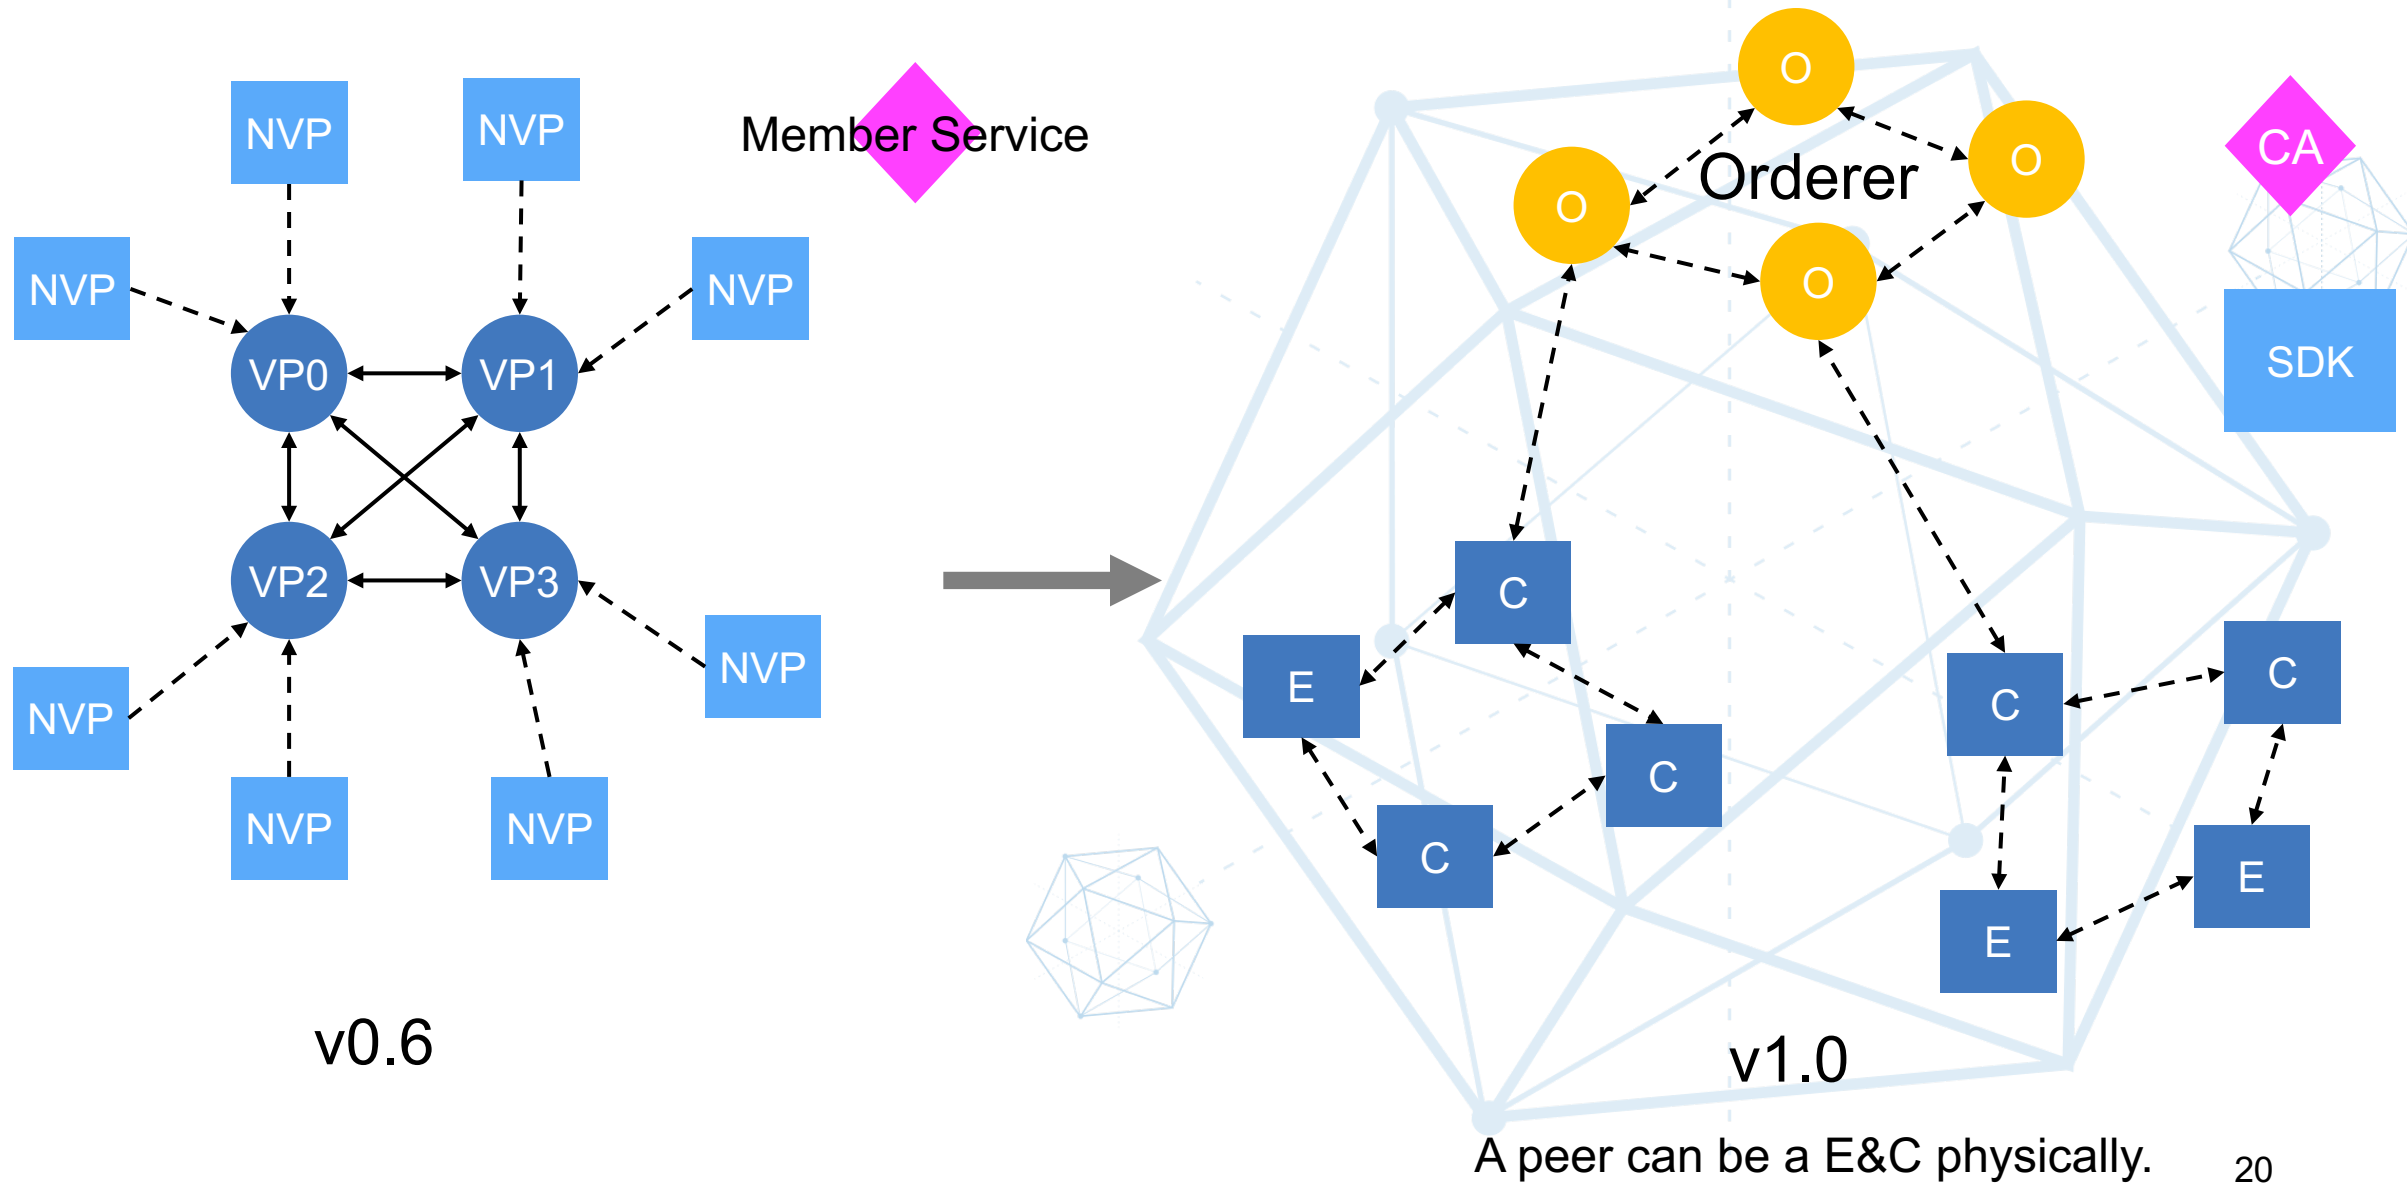

- Modular and Pluggable
  - Membership Services (CA)
  - SDKs (node, python, java, go)
  - Endorsement
  - Consensus service (solo, kafka, bft)
  - Ledger
  - Crypto algorithms (software, HSM)

# Fabric 1.0 Workflow

# Fabric 1.0 Deployment Scenarios

# Hyperledger Fabric Roadmap

## Hack Fest docker images

- 60 participates tested
- Basic v1 architecture in place
- Add / Remove Peers
- Channels
- Node SDK
- Go Chaincode
- Ordering Solo
- Fabric CA

## V1 Alpha \*

- Docker images
- Tooling to bootstrap network
- Fabric CA or bring your own
- Java and Node SDKs
- Ordering Services - Solo and Kafka
- Endorsement policy
- Level DB and Couch DB
- Block dissemination across peers via Gossip

## V1 GA \*

- Hardening, usability, serviceability, load, operability and stress test
- Java Chaincode
- Chaincode ACL
- Chaincode packaging & LCI
- Pluggable crypto
- HSM support
- Consumability of configuration
- Next gen bootstrap tool (config update)
- Config transaction lifecycle
- Eventing security
- Cross Channel Query
- Peer management APIs
- Documentation

## V Next \*

- SBFT
- Archive and pruning
- System Chaincode extensions
- Side DB for private data
- Application crypto library
- Dynamic service discovery
- REST wrapper
- Python SDK
- Identity Mixer (Stretch)
- Tcerts

2016/17 December

March

June

Future

## Connect-a-thon

- 11 companies in Australia, Hungary, UK, US East Coast, US West Coast, Canada dynamically added peers and traded assets

## Connect-a-cloud

- Dynamically connecting OEM hosted cloud environments to trade assets

**HYPERLEDGER**  
BLOCKCHAIN TECHNOLOGIES FOR BUSINESS

\* Dates for Alpha, Beta, and GA are determined by Hyperledger community and are currently proposals.

Proposed Alpha detailed content:

<https://wiki.hyperledger.org/projects/proposedv1alphacontent> 21
